## **Design For Critical Care An Evidence Based Approach:**

**Design for Critical Care** D. Kirk Hamilton, Mardelle McCuskey Shepley, 2010 It is now widely recognized that the physical environment has an impact on the physiology, psychology, and sociology of those who experience it. When designing a critical care unit, the demands on the architect or designer working together with the interdisciplinary team of clinicians are highly specialized. Good design can have a hugely positive impact in terms of the recovery of patients and their hospital experience as a whole. Good design can also contribute to productivity and quality of the work experience for the staff. **Design for Critical Care** presents a thorough and insightful guide to the very best practice in intensive care design, focusing on design that has been successful and beneficial to both hospital staff and hospital patients. By making the connection between research evidence and design practice, Hamilton and McCuskey Shepley present an holistic approach that outlines the future for successful design for critical care settings.

**Handbook Of Intensive Care Organization And Management** Andrew Webb, 2016-07-28 The global trend of increasingly ageing societies and long term illnesses has meant a growth in demand for intensive care resources. This book advises on leadership and organizational development of intensive care units in order to give best practices for governance, performance, emergency response, and safety. Written by international experts in the field, each chapter allows researchers, clinicians, and service providers worldwide to be able to refer to this single reference book. In seven parts, the volume will tackle aspects of intensive care management in both global and local contexts and interrogate the key concerns that service providers face. It works as an informative guide for the practical administration of intensive care as well as being international in its design and information.

**Constructing Professional Discourse** Concepción Orna-Montesinos, 2012 This book explores the fascinating role that language plays in the construction of non

verbal objects by mapping out the ontological meaning of the specialised concepts and the domain specific knowledge embedded in them. In doing so it provides a comprehensive linguistic insight into the discourse of professional domain specific communities and hence into the communication practices and procedures of those communities. In this respect the book offers a response to the claims made by many of the most influential applied linguists today such as Vijay Bhatia 1993 2004 John Swales 1990 2004 or Ken Hyland 2002 among others who have consistently defended the need for applied linguistic research into the textual generic and social perspectives on the under researched interrelatedness of the discoursal and professional practices of a discipline. Specifically this book provides readers with an integrative multi perspective approach to the study of professional domain specific discourses. While it mainly draws on the tenets of genre theory and discourse semantics it also nurtures from the theoretical and empirical foundations of applied linguistics cognitive linguistics corpus linguistics and ontological engineering. The book starts from the analysis of domain specific texts as final written products with specific lexico grammatical semantic and rhetorical features to later enquire into the written products as textual artefacts closely linked to the social context of production and interpretation of the text. This integrative approach provides fresh new insights into the way the processes of writing are affected by the community specific institutional and socio historical circumstances in which domain specific texts are produced.
