

Chapter 11

Cell Communication

Lecture Outline

Overview: The Cellular Internet

- Cell-to-cell communication allows the trillions of cells in a multicellular organism to communicate to coordinate their activities.
- Communication between cells is important for multicellular and unicellular organisms.
- Biologists have discovered universal mechanisms of cellular regulation involving the same small set of cell-signaling mechanisms.
 - The ubiquity of these mechanisms provides additional evidence for the evolutionary relatedness of all life.
- Cells most often communicate by chemical signals, although signals also take other forms.

Concept 11.1 External signals are converted to responses within the cell

- What messages are passed from cell to cell? How do cells respond to these messages?

Cell signaling evolved early in the history of life.

- One topic of cell “conversation” is sex.
- The cells of *Saccharomyces cerevisiae*, the yeast of bread, wine, and beer, identify potential mates by chemical signaling.
- There are two sexes, α and α , each of which secretes a specific signaling molecule, a factor and α factor, respectively.
 - These factors each bind to receptor proteins on the other mating type.
- After the mating factors have bound to the receptors, the two cells grow toward each other and undergo other cellular changes.
 - The two cells fuse, or mate, to form an α/α cell containing the genes of both cells.
- The process by which a signal on a cell’s surface is changed or *transduced* into a specific cellular response is a series of steps called a **signal transduction pathway**.
 - The molecular details of these pathways are strikingly similar in yeast and mammalian cells, even though their last common ancestor lived over a billion years ago.
 - Signaling systems of bacteria and plants also share similarities.
- Similarities in signal transduction pathways suggest that ancestral signaling molecules evolved long ago in ancient prokaryotes and single-celled eukaryotes and have since been adopted for new uses by their multicellular descendants.
- Cell signaling remains important in the microbial world.
