

Trauma Focused CBT (TF-CBT)

Brief Description of Intervention:

It is recognized that many of the child and adolescent clients who receive therapeutic services in Solano County have experienced traumas that include child abuse, witnessing domestic violence, exposure to community violence and other traumatic events that cause significant psychological impacts. Symptoms including intrusive memories, nightmares, emotional numbing, physical/psychological arousal, depression and anxiety are common in these youth and lead to severe impairments in daily living. Trauma Focused CBT (TF-CBT) is an evidence-based model of therapy that has been shown to be 80-85% effective in reducing these symptoms and resolving a diagnosis of Post-Traumatic Stress Disorder (PTSD) in children aged 3-18. It is a short-term model that typically spans 12-20 sessions, with clinicians teaching the client and their family effective coping skills to aid them in being able to cognitively and emotionally process the traumatic events that were experienced.

Anticipated Benefits for the Client [how this will address needs of beneficiary]:

TF-CBT is useful for treating children and adolescents who have experienced the following types of trauma (single episode or chronic):

- Child Abuse (physical, sexual, emotional)
- Victim/Witness of Violence (domestic, community, school)
- Accidents (e.g., motor vehicle)
- Disasters
- War/Terrorism and Refugee
- Medical (e.g., transplant)
- Traumatic Grief

Children or adolescents with the following mental health diagnoses would benefit from TF-CBT:

- PTSD
- Depressive disorders
- Other Anxiety disorders
- Comorbidity is common (ADHD, Oppositional Defiant Disorder, Substance Use Disorders)

Utilizing TF-CBT in mental health treatment can assist with addressing therapeutic themes such as betrayal of trust, self-blame, anger, affective dysregulation, hopelessness, distress in the caregiver-child relationship, and poor school performance (e.g., lower GPA and/or attendance). TF-CBT may also counteract the devastating physiological impacts of trauma such as decreased brain mass, and abnormal hormone levels.
