Common Lisp Guy L. Steele, 1989-12-01 **Intelligent Systems** L.S. Sterling, 2012-12-06 Published in honour of the 70th birthday of Yoh Han Pao George S Dively Dis tinguished Professor of Engineering at Case Western Reserve University Cleveland Ohio this festschrift embraces a remarkably diverse set of topics Drawing from the fields of pattern recognition engineering artificial intelligence and artificial neural systems it is a fitting testament to the extraordinary breadth of his professional in terests both in foundational research into the new technology of Intelligent Systems and ill the application of that evolving technology to the solution of hard engineering problems In common with many scientists who build their reputations in one field before devoting their considerable energies and talents to another one by 1972 the year in which I met him for the first time Yoh Han had made significant contributions to laser technology in particular to the development of the highly accurate and stable lasers required for holographic recording purposes In conventional holography the information stored in a hologram produces a virtual image of the object charac terised by it However Yoh Han became fascinated by the possiblity of driving the process backwards of using the hologram as an associative memory device enabling previously stored information to be retrieved on the basis of partial cues It was this burgeoning interest which shaped his career for more than twenty years Just prior to 1972 my colleagues Professor Christopher Longuet Higgins and Dr **The APDalog** , 1991 *Parallel Symbolic Computing: Languages, Systems, and Applications* Robert H. Halstead, Takayasu Ito, 1993-11-03 Parallel and distributed computing are becoming increasingly important as cost effective ways to achieve high computational performance Symbolic computations are notable for their use of irregular data structures and hence parallel symbolic computing has its own distinctive set of technical challenges The papers in this book are based on presentations made at a workshop at MIT in October 1992 They present results in a wide range of areas including speculative computation scheduling techniques program development tools and environments programming languages and systems models of concurrency and distribution parallel computer architecture and symbolic applications *Computer Algebra With*

Symbolic++ Yorick Hardy,Willi-hans Steeb,Kiat Shi Tan,2008-09-04 This book gives a comprehensive introduction to computer algebra together with advanced topics in this field It provides a detailed coverage of the mathematics of computer algebra as well as a step by step guide to implement a computer algebra system in the object oriented language C The used tools from C are introduced in detail Numerous examples from mathematics physics and engineering are presented to illustrate the system s capabilities Computer algebra implementations in LISP and Haskell are also included In addition gene expression programming and multiexpression programming with applications to computer algebra are introduced

The Art of the Metaobject Protocol Gregor Kiczales,Jim Des Rivieres,Daniel G. Bobrow,1991-07-30 The authors introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS The CLOS metaobject protocol is an elegant high performance extension to the CommonLisp Object System The authors who developed the metaobject protocol and who were among the group that developed CLOS introduce this new approach to programming language design describe its evolution and design principles and present a formal specification of a metaobject protocol for CLOS Kiczales des Rivi res and Bobrow show that the art of metaobject protocol design lies in creating a synthetic combination of object oriented and reflective techniques that can be applied under existing software engineering considerations to yield a new approach to programming language design that meets a broad set of design criteria One of the major benefits of including the metaobject protocol in programming languages is that it allows users to adjust the language to better suit their needs Metaobject protocols also disprove the adage that adding more flexibility to a programming language reduces its performance In presenting the principles of metaobject protocols the authors work with actual code for a simplified implementation of CLOS and its metaobject protocol providing an opportunity for the reader to gain hands on experience with the design process They also include a number of exercises that address important concerns and open issues Gregor Kiczales and Jim des Rivi res are Members of the Research Staff and Daniel Bobrow is a Research Fellow in the System Sciences Laboratory at Xerox Palo Alto Research Center

Boyer,J Strother Moore,1998 This book provides the definitive documentation for one of the most well known and highly regarded theorem proving programs ever written The program described is one of the more significant enduring and prize awarded accomplishments in the fields of artificial intelligence formal methods and applied logic The book provides an exact statement of the logic for which the program is a prover a complete description of the user s commands installation instructions and much tutorial information including references to thousands of pages of examples Among the examples is a formally verified microprocessor and a formally verified compiler targeting that microprocessor The second edition of A Computational Logic handbook provides all the information necessary for using the most recently released version of Nqthm the freely available Boyer Moore theorem proving program The second edition includes a precise description of all recent changes to the logic in the past nine years including many enhanced syntactic features and rules of inference which were added to support work on large scale projects in formal methods Thousands of pages of fascinating exemplary mathematically checked input are described examples that deal with very difficult questions in formal methods and mathematics New material includes Description of the new syntax including COND CASE LET LIST and backquote describes some higher order inference procedures including constrained functions and functional instantiation documents more sophisticated control machinery for manipulating very large theories introduces a secure proof checking environment describes thousands of pages of fascinating example input dealing with very difficult questions in formal methods and mathematics provides a formal parser for the syntax compares the proof complexity of many interesting checked examples includes much new tutorial help especially for the many new features A computational logic is a mathematical logic that is both oriented towards discussion of computation and mechanised so that proofs can be checked by computation The computational logic discussed in the handbook is that developed by Boyer Moore The first edition published in 1988 is an acknowledged classic in the field of formal methods and computational logic However it no longer reflects existing technology The second edition provides a complete overview of the Boyer Moore theorem proving approach Nqthm and

provides examples It includes several significant new features that have been added to the Nquthm system since 1988 The book is structured in the following way Part 1 discusses logic without regard for its mechanisation and answers the question what are the axioms and rules of inference Part 2 discusses its mechanisation and answers the question how does one use the Boyer Moore theorem prover to prove theorems
