

# The Organizational Design-Performance Matrix

## HIGH DESIGN, HIGH PERFORMANCE

Organizations in this quadrant have an effective design and achieve high performance. Example: A tech company with a flat hierarchy and high innovation output.

## HIGH DESIGN, LOW PERFORMANCE

Organizations here have a good design but struggle with performance. Example: A well-structured retail chain facing declining sales due to market saturation.

## LOW DESIGN, HIGH PERFORMANCE

These organizations perform well despite a poor design. Example: A startup with chaotic processes but high revenue growth.

## LOW DESIGN, LOW PERFORMANCE

Organizations in this quadrant have both poor design and performance. Example: A manufacturing firm with outdated processes and declining market share.

## **Design Performance Design Performance:**

*Performance by Design* Ryan Watkins, 2007 This book's unique Performance by Design approach and framework will systematically walk you through the processes, procedures, tools, and techniques that are most valuable in creating performance systems that achieve results.

**Design Performance** Francis J. O'Donnell, Alexander H.B. Duffy, 2005-11-28 3 4 5 6 7 8 9 10 11 1 2 3 1 The continual effort to improve performance in business processes attracts 4 increasing attention in research and industry alike. The impact of design 5 development performance on the overall business positions this area as an 6 important performance improvement opportunity. However, design development is characterised by novelty, uniqueness, and non-repeatability, which 8 provides particular challenges in defining measuring and managing its 9 performance to achieve improvement. 2011 This book explores the support provided by both general research in business process performance and design research for supporting performance 2 improvement in design development. The nature of design development in industrial practice is further revealed, and requirements for its modelling and 3 analysis to achieve improvement are highlighted. 4 A methodology for the modelling and analysis of performance in design 5 development that encapsulates a formalism of performance and an approach 6 for its analysis is established. The formalism is composed of three models 7 which capture the nature of design development performance and support its 8 2 measurement and management. The E model formalises and relates the key 9 3011 elements of performance, i.e. efficiency and effectiveness. The Design Activity 1 Management DAM model distinguishes design and design management 2 activities in terms of the knowledge processed, while the Performance 3 Measurement and Management PMM model describes how these activities 4 relate within a process of measuring and managing performance.

**Seismic Design Methodologies for the Next Generation of Codes** P. Fajfar, 2019-09-10 These proceedings arising from an international workshop present research results and ideas on issues of importance to seismic risk reduction and the development of future seismic codes.

*Modeling, Analysis and Optimization of Process and Energy Systems* F. Carl Knopf, 2011-12-14 Energy costs impact the profitability of virtually all industrial processes. Stressing how plants use power and how that power is actually generated, this book provides a clear and simple way to understand the energy usage in various processes, as well as methods for optimizing these processes using practical hands-on simulations and a unique approach that details solved problems utilizing actual plant data. Invaluable information offers a complete energy saving approach essential for both the chemical and mechanical engineering curricula, as well as for practicing engineers.

*Microelectrofluidic Systems* Tianhao Zhang, Krishnendu Chakrabarty, Richard B. Fair, 2018-10-08 Composite systems that integrate microelectromechanical and microelectrofluidic MEF components with electronics are emerging as the next generation of system on a chip (SOC) designs. However, there remains a pressing need for a structured methodology for MEFS design automation, including modeling techniques and simulation and optimization tools. Integrating top-down and bottom-up design philosophies, *Microelectrofluidic Systems*

presents the first comprehensive design strategy for MEFS This strategy supports hierarchical modeling and simulation from the component level to the system level It leads to multi objective optimization tools valuable in all phases of the design process from conceptualization to final manufacturing The authors begin by defining the basic variables and elements needed to describe MEFS behavior then model that behavior across three layers of abstraction the low level component high level reconfigurable architecture and bio chemical application layers They have developed a hierarchical integrated design environment with SystemC and present its architecture and associated functional packages Microelectrofluidic Systems is visionary in its leverage of electronic design principles for microsystem design and heralds a new era of automated SOC design The strategy it presents holds the potential for significant reductions in design time and life cycle maintenance costs and its techniques and tools for robust design and application flexibility can lead to the high volume production needed for the inevitably growing product market      *Proceedings of 5th International Conference on Civil Engineering and*
