Spaces of Interaction, Places for Experience David Benyon, 2014-10-01 Spaces of Interaction Places for Experience is a book about Human Computer Interaction HCI interaction design ID and user experience UX in the age of ubiquitous computing The book explores interaction and experience through the different spaces that contribute to interaction until it arrives at an understanding of the rich and complex places for experience that will be the focus of the next period for interaction design The book begins by looking at the multilayered nature of interaction and UX not just with new technologies but with technologies that are embedded in the world People inhabit a medium or rather many media which allow them to extend themselves physically mentally and emotionally in many directions The medium that people inhabit includes physical and semiotic material that combine to create user experiences People feel more or less present in these media and more or less engaged with the content of the media From this understanding of people in media the book explores some philosophical and practical issues about designing interactions The book journeys through the design of physical space digital space information space conceptual space and social space It explores concepts of space and place digital ecologies information architecture conceptual blending and technology spaces at work and in the home It discusses navigation of spaces and how people explore and find their way through environments Finally the book arrives at the concept of a blended

space where the physical and digital are tightly interwoven and people experience the blended space as a whole The design of blended spaces needs to be driven by an understanding of the correspondences between the physical and the digital by an understanding of conceptual blending and by the desire to design at a human scale There is no doubt that HCI and ID are changing The design of microinteractions remains important but there is a bigger picture to consider UX is spread across devices over time and across physical spaces The commingling of the physical and the digital in blended spaces leads to new social spaces and new conceptual spaces UX concerns the navigation of these spaces as much as it concerns the design of buttons and screens for apps By taking a spatial perspective on interaction the book provides new insights into the evolving nature of interaction design

Living in Digital Worlds Naomi Jacobs, Rachel Cooper, 2018-01-29 *Living in Digital Worlds* investigates the relationship between human society and technology as our private and particularly our public lives are increasingly undertaken in spaces that are inherently digital digital public spaces The book unpicks why digital technology is such an inextricable part of modern society first by examining the historical relationship between technological development and the early progression of human sociality This is then followed by an examination of the ways in which modern life is currently being impacted by the expansion of digital information and devices into multiple aspects of our lives including focuses on privacy bias and ownership in digital spaces Finally it explores potential future developments and their implications and proposes that it is crucial to consider the design of technology and systems in order to support a positive and beneficial direction of change Each chapter includes case studies primarily drawn from The Creative Exchange a fiveyear programme which ran from 2012 to 2016 to explore the notion of the digital public space through collaborative cross sector research
