Ventilation of Buildings H.B. Awbi, 2004-06-02 Hazim Awbi's *Ventilation of Buildings* has become established as the definitive text on the subject. This new thoroughly revised edition builds on the basic principles of the original text drawing in the results of considerable new research in the field. A new chapter on natural ventilation is also added and recent developments in ventilation concepts and room air distribution are also considered. The text is intended for the practitioner in the building services industry, the architect, the postgraduate student undertaking courses or research in HVAC building services engineering or building environmental engineering and the undergraduate studying building services as a major subject. Readers are assumed to be familiar with the basic principles of fluid flow and heat transfer and some of the material requires more advanced knowledge of partial differential equations which describe the turbulent flow and heat transfer processes of fluids. The book is both a presentation of the practical issues that are needed for modern ventilation system design and a survey of recent developments in the subject.

Environmental Design Randall Thomas, 2006 Written and edited by a team of specialists at Max Fordham LLP, one of the UK's leading environmental and building services engineering consultancies, *Environmental Design* is the result of their extensive experience in designing environmentally friendly buildings. The principles of their approach, which they have taught in numerous schools of architecture and engineering, are clearly presented here. The book starts with some basic scientific principles and environmental issues and then moves on to site planning, energy use, materials and building form. Natural ventilation systems, high efficiency mechanical equipment and alternative energy sources are also covered. State of the art buildings of exceptional quality are incorporated throughout the text and illustrate the authors' belief that environmentally responsible architecture can be visually exciting. They conclude with a selection of detailed case studies of award winning projects including new for this third edition Beaufort Court, King's Langley and the National Trust Headquarters, Swindon. This book is essential reading for architects, engineers, planners and students of these disciplines.

Integrated Sustainable Design of Buildings Paul Appleby, 2012-10-12 *Integrated Sustainable Design of Buildings* aims to provide a guide to members of design and masterplanning teams on how to deliver sustainable development and buildings cost effectively meeting current and emerging UK and international statutory and planning requirements. Using a series of case histories and examples from the author's ten years of providing sustainability advisory services, the book sets out a clear and understandable strategy that deals with all aspects of sustainable design and construction and the implications for delivery costs, saleability and long term operation. The extensive scope includes all aspects of environmental, social and economic sustainability including strategies to reduce carbon emissions and the impact of climate change. *Integrated Sustainable Design of Buildings* appeared in the Cambridge Top 40 Sustainability Books of 2010.
