The Psychology of Pain Relief David Cosio,2025-08-28 The world in the 21st century is an analgesic culture one in which individuals work to avoid pain and distress When this effort fails individuals believe it is because pain falls outside of their expectations The pain lasts too long does not respond to treatment or begins to impair their social function People who suffer from chronic pain often persevere in misdirected attempts to solve the problem of pain and unwittingly fall deeper into distress and disability In general the goals of psychological treatment are to reframe the problem of pain toward one of self management improved engagement in valued activities reduced affective distress and a reduction in the complaint of pain This book aims to empower healthcare providers university teachers and researchers to help them understand the normal psychology of pain and its relationship with mental health disorders and to guide them through different approaches to the psychological treatment of chronic pain
