algorithmic recommendations prescribe our experiences. This network of mathematically determined choices the Filterworld has taken over almost unnoticed as we've grown accustomed to an insipid new normal. But to have our tastes, behaviours and emotions governed by computers calls the very notion of free will into question. Internationally recognized journalist and New Yorker staff writer Kyle Chayka journeys through this ever tightening web woven by algorithms. He explores how online and offline spaces alike have been engineered for seamless consumption. How the lowest common denominator is promoted at the expense of the complex, diverse or challenging. How users of technology contend with data driven equations that promise to anticipate their desires but often get them wrong. How the Filterworld is determining the very shape of culture itself. Chayka skilfully and compellingly traces this creeping machine guided curation that influences not just what culture we consume but what culture is produced. In doing so he attempts to answer to the most urgent question currently facing us is personal freedom ever again possible on the Internet. Filterworld is a fascinating history of the rise of the algorithm and an important investigation into where it could take us next if we let it.

### **Carbon Capture and Storage in the United Kingdom**

Marc Hudson, 2024-03-27. This book is a concise but comprehensive guide to the history, present and possible futures of carbon capture and storage policy and action in the United Kingdom. UK. There have been multiple failed starts, promises and last chances for carbon capture and storage (CCS) in Europe, North America, China and Australia, but thus far it has repeatedly collided with the political and economic realities that the technology is too expensive and complicated to gain and keep policymakers' support. However, in the UK, that might be changing with explicit government support for CCS to help decarbonise industry. Set within the broader context of global interest in CCS, this book first outlines the technologies involved in the types of capture, transport options and storage options in the UK. It then briefly introduces an overarching policy analysis framework, John Kingdon's multiple streams approach, and uses it to give an account of the long history of CCS interest and efforts in three chapters covering the 1970s to 2002, 2003 to 2015 and 2016 to the present day. Marc Hudson focusses on the various arguments made for the introduction of CCS and the slowly shifting coalitions of actors who make those arguments while contrasting these with the perspectives of those opposed to CCS. This book will be of great interest to students, scholars and policymakers researching and working in the field as well as the related areas of energy, policy, energy transitions and climate change.
