**Human and Machine Problem Solving** K.J. Gilhooly, 2012-12-06 Problem solving is a central topic for both cognitive psychology and artificial intelligence AI Psychology seeks to analyze naturally occurring problem solving into hypothetical processes while AI seeks to synthesize problem solving performance from well defined processes Psychology may suggest possible processes to AI and in turn AI may suggest plausible hypotheses to psychology It should be useful for both sides to have some idea of the other's contribution hence this book which brings together overviews of psychological and AI research in major areas of problem solving At a more general level this book is intended to be a contribution toward comparative cognitive science Cognitive science is the study of intelligent systems whether natural or artificial and treats both organisms and computers as types of information processing systems Clearly humans and typical current computers have rather different functional or cognitive architectures Thus insights into the role of cognitive architecture in performance may be gained by comparing typical human problem solving with efficient machine problem solving over a range of tasks Readers may notice that there is little mention of connectionist approaches in this volume This is because at the time of writing such approaches have had little or no impact on research at the problem solving level Should a similar volume be produced in ten years or so of course a very different story may need to be told
