*Advanced Information Networking and Applications* Leonard Barolli, Farookh Hussain, Tomoya Enokido, 2022-03-30 This book covers the theory, design, and applications of computer networks, distributed computing, and information systems. Networks of today are going through a rapid evolution, and there are many emerging areas of information networking and their applications. Heterogeneous networking, supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence, and actuations, is emerging as a critically important disruptive computer class based on a new platform networking structure and interface that enable novel, low-cost, and high-volume applications. Several of such applications have been difficult to realize because of many interconnections problems. To fulfill their large range of applications, different kinds of networks need to collaborate and wired and next-generation wireless systems should be integrated in order to develop high-performance computing solutions to problems arising from the complexities of these networks. The aim of the book *Advanced Information Networking and Applications* is to provide a comprehensive overview of the latest developments in the field, including the design, implementation, and management of complex networks.

Applications is to provide the latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications

Visioning Technologies Graham Cairns,2016-12-08 Visioning Technologies brings together a collection of texts from leading theorists to examine how architecture has been and is reframed and restructured by the visual and theoretical frameworks introduced by different technologies of sight understood to include orthographic projection perspective drawing telescopic devices photography film and computer visualization amongst others Each chapter deals with its own area and historical period of expertise organized sequentially to mark out and analyse the historical evolution of how architecture has been transformed by technologically induced shifts in human perception from the 15th century until today This book underlines the way in which architectural forms and design processes have developed historically in conjunction with the systems of sight we manufacture technologically and suggests this continues today Paradoxically it is premised on the argument that these technological systems tend in their initial formulations to obtain ever greater realism in our visualizations of the physical world    **The Children's Folklore Review** ,2012    Keio Communication Review ,2010

obscure as only recent Bills tabled in Parliament try and address the issue in depth In light of the findings of this research it was established that the problem is not so heavy on laws and regulation on taxation of goods sold electronically but rather implementation of the applicable laws where they exist The paper finally recommends possible amendments to the Kenyan legal framework and the proposed amendments are assessed by means of comparison with what has taken place in other jurisdictions
