Neuroscience perspectives on Security: Technology, Detection, and Decision Making Elena Rusconi,Kenneth C. Scott-Brown,Andrea Szymkowiak,2015-08-03 In security science efficient operation depends typically on the interaction between technology human and machine detection and human and machine decision making A perfect example of this interplay is gatekeeping which is aimed to prevent the passage of people and objects that represent known threats from one end to the other end of an access point Gatekeeping is most often achieved via visual inspections mass screening random sample probing and or more targeted controls on attempted passages at points of entry Points of entry may be physical e g national borders or virtual e g connection log ons Who and what are defined as security threats and the resources available to gatekeepers determine the type of checks and technologies that are put in place to ensure appropriate access control More often than not the net performance of technology aided screening and authentication systems ultimately depends on the characteristics of human operators Assessing cognitive affective behavioural perceptual and brain processes that may affect gatekeepers while undertaking this task is fundamental On the other hand assessing the same processes in those individuals who try to breach access to secure systems e g hackers and try to cheat controls e g smugglers is equally fundamental and challenging From a security standpoint it is vital to be able to anticipate focus on and correctly interpret the signals connected with such attempts to breach access and or elude controls in order to be proactive and to enact

appropriate responses Knowing cognitive behavioral social and neural constraints that may affect the security enterprise will undoubtedly result in a more effective deployment of existing human and technological resources Studying how inter observer variability human factors and biology may affect the security agenda and the usability of existing security technologies is of great economic and policy interest In addition brain sciences may suggest the possibility of novel methods of surveillance and intelligence gathering This is just one example of a typical security issue that may be fruitfully tackled from a neuroscientific and interdisciplinary perspective The objective of our Research Topic was to document across relevant disciplines some of the most recent developments ideas methods and empirical findings that have the potential to expand our knowledge of the human factors involved in the security process To this end we welcomed empirical contributions using different methodologies such as those applied in human cognitive neuroscience biometrics and ethology We also accepted original theoretical contributions in the form of review articles perspectives or opinion papers on this topic The submissions brought together researchers from different backgrounds to discuss topics which have scientific applicative and social relevance **Proceedings of the 3rd International Symposium of Information and Internet Technology (SYMINTECH 2018)** Mohd Azlishah Othman,Mohamad Zoinol Abidin Abd Aziz,Mohd Shakir Md Saat,Mohamad Harris Misran,2019-05-15 This book gathers the proceedings of a symposium on the role of Internet technologies and how they can transform and improve people s lives The Internet is essentially a massive database where all types of information can be shared and transmitted This can be done passively in the form of non interactive websites and blogs or it can be done actively in the form of file sharing and document up and downloading Thanks to these technologies a wealth of information is now available to anyone who can access the Internet Moreover Internet technologies are constantly improving growing faster offering more diverse information and supporting processes that would have been impossible in the past As a result they have changed and will continue to change the way that the world does business and how people interact in their day to day lives In conclusion the symposium and these proceedings provide a valuable opportunity for leading researchers engineers and professionals around the globe to discuss the latest advances that are helping the world move forward They also facilitate the exchange of new ideas in the fields of communication technology to create a dialogue between these groups concerning the latest innovations trends and concerns practical challenges and potential solutions in the field of Internet technologies **NBS Technical Note** ,1978 *Port Louis Harbour Guide* ,2008 **Traffic control systems handbook** United States.
