## **Ceb Fip Model Code 1990 Design Code:**

*CEB-FIP Model Code 1990* FIB – International Federation for Structural Concrete, 1993-01-01 This design code for concrete structures is the result of a complete revision to the former Model Code 1978 which was produced jointly by CEB and FIP. The 1978 Model Code has had a considerable impact on the national design codes in many countries. In particular it has been used extensively for the harmonisation of national design codes and as basic reference for Eurocode 2. The 1990 Model Code provides comprehensive guidance to the scientific and technical developments that have occurred over the past decade in the safety analysis and design of concrete structures. It has already influenced the codification work that is being carried out both nationally and internationally and will continue so to do.

The development of reinforced and prestressed concrete during the last 50 years was highly promoted by the Comité Euro international du Béton CEB and the Fédération Internationale de la Précontrainte FIP. In 1998 these two associations merged forming the Fédération Internationale du Béton fib. The results of CEB and FIP had been distributed in different ways such as CEB Bulletins d'Information FIP Reports FIP Notes and CEB News. These Bulletins or reports comprised various kinds of information such as State of the Art Reports Research Reports Application Manuals Guides to Good Practice and the CEB FIP Model Codes 1978 and 1990. These Model Codes provided design principles and application rules to the structural engineering profession and have been predominantly used for code drafting by many national and international standardizing bodies. The Textbook on Structural Concrete is now intended to provide background information and justification especially for the CEB FIP Model Code 90 and in some fields of recently extended knowledge. It is addressed to advanced students; this means that basic information on structural analysis and behaviour of structural concrete is a required prerequisite. Practising structural engineers may utilize it for gaining background information on the CEB FIP Model Code 90 and national or regional codes as for ex EUROCODE 2 based on MC 90. The Textbook is also conceived to assist teachers at technical universities or engineering schools to achieve better

understanding of the recent theories on structural concrete Having these targets in mind the General Assembly of CEB decided already in 1995 to set up a Special Activity Group Dissemination of Knowledge to realise that work The authors invited to draft the different chapters had been mostly involved already in drafting the Model Code 90 In this way consistent information could be provided both for the code and the textbook Each chapter has been thoroughly discussed and commented within the Special Activity Group 2 This textbook was first presented to fib members during the Technical Activity Workshop in October 1999 in Prague held in connection with the first fib symposium The authors are looking forward to receiving comments from various corners
