

1. Describe the function of the following organelles, and label on the cell:

- Nucleus: the control center, it directs all the activities of the cell
- Cell membrane: gate keeper, allow things in and out of the cell
- Cell wall: (plant cells) adds structure to the plant cell, and provides protection
- Cytoplasm: holds the organelles, place where chemical reactions occur
- Mitochondria: provides the cell with energy; place where cellular respiration takes place
- Chloroplast: makes food for plant cell; place where photosynthesis takes place
- Golgi bodies: sort proteins and packages them into vesicles to move them out of the cell
- Vacuole: storage area for food, water, and waste materials

2. What is the difference between cell, tissue, organ, organ systems and how are they related? Cells are the smallest unit that carries out the functions of life. Tissues are groups of similar cells performing the same function. Organs are groups of different tissues that work together to perform a major function. Organ system are a group of different organs working together to carry out a particular function.

3. What is the building block of life? Cells

4. Explain the difference between prokaryotic and eukaryotic cells. Prokaryotic cells are unicellular, lack a nucleus and membrane bound organelles inside the cell. Eukaryotic cells has a nucleus and have a nucleus and have membrane bound structures inside the cell called organelles (many celled / multicellular).

5. List two examples of prokaryotic and eukaryotic organisms. Prokaryotic-bacteria and amoeba. Eukaryotic-animals, plants, insects, fungi, and reptiles. (You could name individual members of these groups in your answer)

6. Explain the difference between producers and consumers (heterotrophs and autotrophs) and list five examples of each. Autotrophs (Producers) make their own food. Heterotrophs (Consumers) do not make their own food. Consumers depend on producers to provide their food.

- Autotrophs (Producers)- plants
- Heterotrophs (Consumers)- animals (owls, porcupine), slime molds, mushrooms.

7. What are the beginning reactants of photosynthesis? Carbon dioxide, water and sunlight

8. What happens during photosynthesis and where does it take place? The sun's energy, water, and carbon dioxide is taken into the cell in the chloroplast, and glucose and oxygen is released. Oxygen leaves the plant and the glucose is used or stored by the cell. The process that plants use to make their food; occurs in the chloroplast.

10. How does photosynthesis benefit heterotrophs? (1) Some heterotrophs eat autotrophs and use the energy in the autotroph's stored food. (2) We get oxygen released through the process of photosynthesis.

11. What happens during respiration, what are the beginning reactants and ending products? Cells break down simple food molecules such as glucose and release the energy they contain. It is carried out continuously. Glucose and Oxygen move into the mitochondria of the cell, and carbon dioxide, water, and energy is released.

12. Respiration begins in the cytoplasm, and the stage of respiration that releases most of the energy in glucose occurs in the mitochondria.

13. The energy-releasing process that does not require oxygen is called fermentation.

14. Explain the difference between alcohol and lactic acid fermentation. Give an example of where these occur and what organisms go through these fermentation processes.

Cell Unit Study Guide Answer Key:

Study Guide for Pharmacology and the Nursing Process Linda Lane Lilley, PhD RN, 2016-01-02 Prepare for success in pharmacology and on the NCLEX Examination with the Study Guide for Pharmacology and the Nursing Process 8th Edition. Designed to accompany Lilley's Pharmacology and the Nursing Process 8th Edition textbook, this workbook features worksheets for each chapter that include NCLEX RN style review questions, critical thinking and application questions, case studies, and other educationally sound learning activities. Chapter by chapter worksheets are divided into 3 main sections: Chapter Review and NCLEX Examination Preparation, Critical Thinking and Application, and Case Study Focus. On prioritization features at least one prioritization exercise in which the reader must evaluate a clinical scenario and answer the question "What is the nurse's best action?". Overview of dosage calculations section contains explanations of key drug calculations concepts, sample drug labels, practice problems, and a practice quiz. Answers for all exercises are provided at the back of the book to facilitate self-study. Learning strategies expands upon the unique cartoon illustrated study strategies included in the Lilley text. NEW Expanded NCLEX focus includes one to two additional NCLEX Examination style questions for each chapter, including additional alternate item format types. Chapter review and NCLEX Examination preparation included in each chapter worksheet contains a number of application based NCLEX practice questions, including at least one alternate item question per chapter. NEW Updated content is completely current and consistent with the Lilley textbook.

Study Guide for Pharmacology and the Nursing Process - E-Book Linda Lane Lilley, Shelly Rainforth Collins, Julie S. Snyder, 2016-01-19 Prepare for success in pharmacology and on the NCLEX Examination with the Study Guide for Pharmacology and the Nursing Process 8th Edition. Designed to accompany Lilley's Pharmacology and the Nursing Process 8th Edition textbook, this workbook features worksheets for each chapter that include NCLEX RN Examination style review questions, critical thinking and application questions, case studies, and other educationally sound learning activities.
