1. Determine whether each of the following is an example of *observation and data*, a *theory*, a *hypothesis*, a *control*, or a *model*.

Observation and Data _____

a. A research team records the rainfall in inches per day in a prescribed area of the rain forest. The square footage of vegetation and relative plant density per square foot are also measured.

Observation and Data _____

b. The intensity, duration, and time of day of the precipitation are noted for each precipitation episode. The types of vegetation in the area are recorded and classified.

Control _____

c. The information gathered is compared with the data on the average precipitation and the plant population collected over the last 10 years.

Hypothesis _____

d. The information gathered by the research team indicates that rainfall has decreased significantly. They propose that deforestation is the primary cause of this phenomenon.

2. "When 10.0 g of a white, crystalline sugar are dissolved in 100. mL of water, the solution is observed to freeze at -0.54°C , not 0.0°C . The system is denser than pure water." Which parts of these statements represent quantitative information, and which parts represent qualitative information?

Quantitative values include the mass of sugar, volume of water, and observed freezing point. Qualitative properties are the color and state of the sugar and the claim of greater density. _____

D. 3. Which of these observations is qualitative rather than quantitative?
