### Physical and Chemical Properties

- 1) All matter has what two characteristics (that distinguish it from energy)?  
Have mass and takes up space (volume).
- 2) Intensive physical property versus extensive physical property
  - a. What is the difference between the two?  
Intensive properties do not depend on the amount of substance present and extensive properties depend on the quantity or the amount of substance.
  - b. Give two examples of each.  
Density and boiling point for Intensive.  
Mass and volume for Extensive.
  - c. Explain why only intensive physical properties can be used to identify an unknown object.  
Intensive properties are unique to a material and remain constant regardless of how much of the material is present. In contrast, extensive properties like mass and volume depend on the sample size and cannot uniquely identify a material.
- 3) What is the difference between a physical change and a chemical change?  
A physical change affects the substance's appearance, state, or properties, but its chemical composition remains unchanged and chemical change involves a reaction that alters the substance's chemical composition, resulting in the formation of new substances with different properties.
- 4) Label each of these as Physical (P) or Chemical (C) changes:
  - A. Food going bad (C)
  - B. Gold melting (P)
  - C. Salt dissolving (P)
  - D. Wood burning (C)
  - E. Paper tearing (P)
  - F. Water vaporizing (P)
- 5) Density
  - a. What is density?  
Density is a physical that measures how much mass is contained in each volume.
