Within enacted practice design can feature within intended learning outcomes for example in learning to design and it can
feature within pedagogical methodologies for example by learning through design Often holding differing disciplinary
interpretations such as design as cyclical problem solving iterative design conceptual design or design with or without make
understanding the educational merits of the ill defined and open nature of authentic designerly activity is paramount This
Research Topic sets out to gain a more nuanced understanding of the value and role s of design within STEM educational
contexts This Research Topic focuses on design within STEM educational contexts particularly in terms of teaching learning
and assessment The aim is to contribute to the evidential basis which can be used to guide the incorporation of design into
educational practice The topic has two central research objectives The first is to generate evidence regarding what design is
in STEM education For example is the ability to design a singular or manifold construct Is the capacity to design or are
factors of this ability both learnable and teachable How transferable is designerly knowledge between contexts How do
different disciplinary contexts influence the interpretation of design The second is to further our understanding of how best
to incorporate design within STEM education contexts For example how much emphasis should be placed on learning to or
through design in school How should design be assessed within formal education Where and when is design best
incorporated into education In posing these questions the goal of this research topic is to provide scholarly discourse which
supports critical reflection and the challenging of assumptions regarding design in education **Psychological
