restoration initiatives are now widespread across the world. The research efforts undertaken to support them are increasingly interdisciplinary focusing on ecological, chemical, physical as well as societal issues. *River Restoration: Political, Social and Economic Perspectives* provides a comprehensive overview of research in the field of river restoration in humanities and the social sciences. It illustrates how in the last thirty years or so such approaches have evolved and strengthened within the restoration sciences. The scientific community working in this domain has structured itself often regionally and circumstantially to critically assess and improve restoration policies and practices. As a research field, river restoration tackles three thematic axes: Human-river interactions, especially perceptions and practices of rivers, and how these interactions can be changed by restoration projects; Political processes, with a particular interest in governance and decision making; and a specific emphasis on the question of public participation in restoration projects. Evaluation of the social and economic benefits of river restoration. *River Restoration: Political, Social and Economic Perspectives* encompasses these three topics and more to provide the reader with the most up to date and holistic view of this constantly evolving area. The book will be of particular interest to human and social scientists, biophysical scientists, hydrologists, geomorphologists, ecologists, environmental scientists, public policy makers, design or planning officers and anyone working in the field of river restoration.

**Teaching Innovations in Economics** María del Carmen Valls Martínez, José-María Montero, 2024-10-31 This book highlights the latest technological innovations in economics education. Economics as a discipline not only studies the relationship between ends and scarce means which can be used alternatively but also serves as a social science that uses historical data to predict future events, a task complicated by the influence of human behavior. In economics a solid theoretical foundation alone is insufficient; practical application requires a deep understanding of statistics. With the vast amount of information available today, data processing is now performed using specialized software. Consequently, teaching economics demands a wide range of complex skills that have significantly evolved in recent years, driven by the growing interest in educational innovation among professors and scientists, further accelerated by advancements in new technologies. Moreover, economics education is increasingly aligned with the global concern for sustainability as emphasized in the United Nations Agenda 2030. Professors are now integrating sustainability into syllabi and teaching methodologies. This book covers key topics such as Technological and innovative advancements in economics education, New teaching learning theories and models in economics education, The impact of digital transformation on economics education, The role of artificial intelligence in economics education, Addressing special educational needs in economics education, Evaluation of the teaching learning process in economics, Assessment of student learning in economics.
