### Important Safety Instructions

It is important for the safety of persons to follow all instructions. Follow all instructions as listed in these instructions and read the separate instructions. Refer those instructions.

- Before installing the drive, check that the door is in good mechanical condition, correctly balanced and opens and closes properly.
- a. The door is designed to be well balanced and aligned if it:
- b. requires an equivalent amount of applied force to either manually open or close,
- c. moves less than 1.500N (150kg) of applied force to either manually open or close,
- d. does not rise or fall more than 500mm when released at any point between fully open or fully closed position,
- e. does not rub on or incorrectly make contact with any supporting or surrounding structures.
- Have a qualified person check and make repairs if required.
- Before installing the drive, remove all unnecessary ropes or chains and disable any equipment, such as locks, not needed for powered operation.
- Ensure that the drive is not run for one full minute at a height lower than 2.0m.
- When carrying the drive, take care concerning the manual reverse adjustment to the existing members.
- Install any fixed control at a height of at least 2.5m and within sight of the door but away from moving parts.
- Permanently fix the labels warning against entrapment in a permanent place or near any fixed controls.
- After installation, ensure that the mechanism is properly adjusted and that the drive removes the door from the track at 500mm high object placed on the floor. The drive must not stop during an emergency protection system (depending on contact with the bottom edge of the door).
- After installation, ensure that the parts of the door do not exceed over travel requirements or limits.
- After installation, ensure that the drive prevents or stops the opening movement when the door is loaded with a mass of 20 kg, fixed centrally on the bottom edge of the door (for drives that can open and close doors with a height of 2.0m or less, then 500mm in diameter).
- Never use the Drive to close the garage door in full view and these from any object which may impede its movement such as garden plants.
- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instructions concerning use of the appliance in a safe way and understand the hazards involved.
- Children shall not play with the appliance.

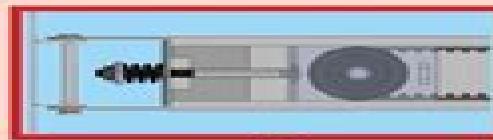

- Climbing and other misadventures shall not be made by children without supervision. Do not allow children to play with door controls. Keep remote controls away from children.
- Watch the moving door and keep people away until the door is completely opened or closed.
- Take care when operating the manual release since an open door may fall rapidly due to weak or broken springs, or being out of balance.
- Frequently examine the installation. In particular check cables, springs and mountings for signs of wear, damage or loosening. Do not use of repair or adjustment is needed since a fault in the drive, cables, ropes, or other components could cause serious injury.
- Each month check that the drive removes when the door contacts a 500mm high object placed on the floor. Adjust if necessary and recheck since an incorrect adjustment may rebound.
- Never attempt to open or close the garage door by pulling on the Engage/Disengage Cable.
- Removal of the protective covers must only be performed by a technically qualified person.
- Do not use the Drive to remove any part of the door or remove covers from the Drive without first disconnecting the power cord to the power supply.
- For safety reasons always ensure that the garage door is fully open and stationary before driving into or out of the garage.
- For security reasons always ensure the garage door is fully closed and stationary before moving out of the garage.
- Keep children away from the Drive and moving garage door at all times.
- Consider that the Safety Reverse system is function. It must first sense an under arm obstruction in the form of an object/person on to which some force must be exerted. As a result the object/person/garage door may suffer damage and/or injury.
- Adjustments to the Safety Reverse system settings must only be carried out by a technically qualified person.
- The Safety Reverse System is designed to work on STATIONARY objects only. Serious personal injury could occur if the garage door comes into contact with a moving object and/or any object on the floor.
- For additional safety we strongly recommend the inclusion of Safety Sensors. Although the Drive incorporates a permanent position Safety Reverse system, the addition of Safety Sensors will greatly enhance the safety of an automatic garage door and provide additional peace of mind. In some instances it is a requirement or law to fit Safety Sensors. It is the sole responsibility of the customer to fit the Safety Sensors in their controllers that is required.
