Cermark Super ViperJet MKII

Part 1

A scale ARTF that has sport-jet looks

The Cormaric Viperjet MKII is a near scale (1.45x) model of an American full-size, home-built kit. The B111 size version is built to a very high specification which includes oversized vacuumed carbon fibre with a 1/2 inch honeycomb core. Built by sub-contractors, it allows the customer to complete their project and spend more time flying and less time dressing up it. The outstanding performance demonstrates the outstanding design and engineering skills that have gone into the project. With a choice of power plants, from small to wild it can be tailored to individual taste. An estimated rate of climb of 122,000 ft/min and speeds of 500 mph make this a must have on any pilot's list.

That's a description of the full-size aircraft. The model version is much the same - it is without doubt an A.R.T.F. of the best quality. It comes in the normal collie-sized cardboard box, with everything individually packed in bubble wrap bags which will make good covers once the model is finished.

The construction notes (24 pages with 54 photographs) are mainly photographs with not much in the way of instructions. I think that

the manufacturer has assumed that anyone building this model has some experience of jet modelling. So this review will cover some important points in case they could be of help to those who might find the instructions lacking. Some of my suggestions reflect personal preferences, but they are all included for safety reasons above all else.

"When I start to build a scale model the first things I look for are details of the full size. Colour schemes, undercarriage, lights, cockpit detail - these are just a few things that spring to mind. This is where the fullsize.org project scores high as it has its own web site - <http://www.cessna.org>. This has loads of first class pictures and everything of interest and will be a big help to all these scale modelers out there."

Executive Summary

The fuselage is of gel coated epoxy fibreglass construction with carbon fibre reinforcement at all critical stress areas. All the laser cut aircraft grade ply formers are supplied glued in place, with the glass fibre reinforced with carbon fibre tows, making a very strong structure. The only work to do here is to

The space under the cockpit shows the reinforcing of the former bands. Viewed from the front, showing the bifurcated air intake.
