## **Cellular Genetic Algorithms Operations Researchcomputer Science Interfaces Series:**

**Cellular Genetic Algorithms** Enrique Alba,Bernabe Dorronsoro,2009-04-05 Cellular Genetic Algorithms defines a new class of optimization algorithms based on the concepts of structured populations and Genetic Algorithms GAs The authors explain and demonstrate the validity of these cellular genetic algorithms throughout the book with equal and parallel emphasis on both theory and practice This book is a key source for studying and designing cellular GAs as well as a self contained primary reference book for these algorithms

## **Evolutionary Algorithms for Mobile Ad Hoc Networks**

Bernabé Dorronsoro,Patricia Ruiz,Grégoire Danoy,Yoann Pigné,Pascal Bouvry,2014-04-08 Describes how evolutionary algorithms EAs can be used to identify model and minimize day to day problems that arise for researchers in optimization and mobile networking Mobile ad hoc networks MANETs vehicular networks VANETs sensor networks SNs and hybrid networks each of these require a designer s keen sense and knowledge of evolutionary algorithms in order to help with the common issues that plague professionals involved in optimization and mobile networking This book introduces readers to both mobile ad hoc networks and evolutionary algorithms presenting basic concepts as well as detailed descriptions of each It demonstrates how metaheuristics and evolutionary algorithms EAs can be used to help provide low cost operations in the optimization process allowing designers to put some intelligence or sophistication into the design It also offers efficient and accurate information on dissemination algorithms topology management and mobility models to address challenges in the field Evolutionary Algorithms for Mobile Ad Hoc Networks Instructs on how to identify model and optimize solutions to problems that arise in daily research Presents complete and up to date surveys on topics like network and mobility simulators Provides sample problems along with solutions descriptions used to solve each with performance comparisons Covers current relevant issues in mobile networks like energy use broadcasting performance device mobility and more Evolutionary Algorithms for Mobile Ad Hoc Networks is an ideal book for researchers and students involved in mobile networks optimization advanced search techniques and multi objective optimization

*Handbook of Energy-Aware and Green Computing - Two Volume Set* Ishfaq Ahmad,Sanjay Ranka,2016-02-03 Implementing energy efficient CPUs and peripherals as well as reducing resource consumption have become emerging trends in computing As computers increase in speed and power their energy issues become more and more prevalent The need to develop and promote environmentally friendly computer technologies and systems has also come to the forefront

Operations Research and Cyber-Infrastructure John W. Chinneck,Bjarni Kristjansson,Matthew J. Saltzman,2009-01-05 Operations Research and Cyber Infrastructure is the companion volume to the Eleventh INFORMS Computing Society Conference ICS 2009 held in Charleston South Carolina from January 11 to 13 2009 It includes 24 high quality refereed research papers As always the focus of interest for ICS is the interface between Operations Research and Computer Science and the papers in this volume reflect that interest This is naturally an evolving area as computational power increases rapidly while decreasing in cost even more quickly and the

papers included here illustrate the wide range of topics at this interface **EVOLVE - A Bridge between Probability, Set Oriented Numerics and Evolutionary Computation VII** Michael Emmerich, André Deutz, Oliver Schütze, Pierrick Legrand, Emilia Tantar, Alexandru-Adrian Tantar, 2017-04-27 This book comprises nine selected works on numerical and computational methods for solving multiobjective optimization game theory and machine learning problems. It provides extended versions of selected papers from various fields of science such as computer science, mathematics and engineering that were presented at EVOLVE 2013 held in July 2013 at Leiden University in the Netherlands. The internationally peer reviewed papers include original work on important topics in both theory and applications such as the role of diversity in optimization, statistical approaches to combinatorial optimization, computational game theory and cell mapping techniques for numerical landscape exploration. Applications focus on aspects including robustness handling multiple objectives and complex search spaces in engineering design and computational biology **Optimization Techniques for Solving Complex Problems** Enrique Alba, Christian Blum, Pedro Asasi, Coromoto Leon, Juan Antonio Gomez, 2009-03-23 Real world problems and modern optimization techniques to solve them. Here a team of international experts brings together core ideas for solving complex problems in optimization across a wide variety of real world settings including computer science, engineering, transportation, telecommunications and bioinformatics. Part One covers methodologies for complex problem solving including genetic programming, neural networks, genetic algorithms, hybrid evolutionary algorithms and more. Part Two delves into applications including DNA sequencing and reconstruction, location of antennae in telecommunication networks, metaheuristics, FPGAs, problems arising in telecommunication networks, image processing, time series prediction and more. All chapters contain examples that illustrate the applications themselves as well as the actual performance of the algorithms. Optimization Techniques for Solving Complex Problems is a valuable resource for practitioners and researchers who work with optimization in real world settings **2010** Redaktion Osnabrück, 2011-06-16 *Metaheuristics for Scheduling in Distributed Computing Environments* Fatos Xhafa, Ajith Abraham, 2008-09-08 Grid computing has emerged as one of the most promising computing paradigms of the new millennium. Achieving high performance Grid computing requires techniques to efficiently and adaptively allocate jobs and applications to available resources in a large scale, highly heterogeneous and dynamic environment. This volume presents metaheuristics approaches for Grid scheduling problems. Due to the complex nature of the problem, metaheuristics are primary techniques for the design and implementation of efficient Grid schedulers. The volume brings new ideas, analysis, implementations and evaluation of metaheuristic techniques for Grid scheduling, which make this volume novel in several aspects. The 14 chapters of this volume have identified several important formulations of the problem which we believe will serve as a reference for the researchers in the Grid computing community. Important features include the detailed overview of the various novel metaheuristic scheduling approaches, excellent coverage of timely advanced scheduling topics, state-of-the-art theoretical research and application developments and

chapters authored by pioneers in the field Academics scientists as well as engineers engaged in research development and scheduling will find the comprehensive coverage of this book invaluable     *Subject Guide to Books in Print* ,1991     *OR/MS Today* ,2004     *Research Centers Directory* ,1986 Research institutes foundations centers bureaus laboratories experiment stations and other similar nonprofit facilities organizations and activities in the United States and Canada Entry gives identifying and descriptive information of staff and work Institutional research centers and subject indexes 5th ed 5491 entries 6th ed 6268 entries     *Who's who in European Research and Development* ,1997     *Telecommunications Optimization* David W.
