Resilient Operation of Distribution Grids with Distributed-Hierarchical Architecture Elisabeth Drayer, 2018-11-20 This thesis is about the design and the implementation of a resilient grid operation for the distribution grid This research question is induced by the advancing of three trends Decarbonisation decentralisation and digitalisation These three trends transform the hitherto passive distribution grid into an active system that contains an active operation The term resilience describes capabilities of the system to absorb to adapt and to recover from faults and disturbances This concept is realised on the one hand with the choice of the operation architecture on the other hand for the choice of possible methods and functions This thesis develops a distributed hierarchical operation architecture For this architecture several methods have been developed that optimally benefit from the operation architecture and that allow the fully automated operation of the distribution grid For that purpose a heuristic optimisation has been developed to solve problems like voltage profile violations and congestions Another important method especially with regard to resilience is the self healing capability to resupply clients after permanent faults

Communication and Security in Cyber-physical Systems Mohammad Javad Khojasteh, 2019 Recent technological advances in networking communication and computation technologies have enabled the development of cyber physical systems and cloud robotics where computing communication and control are tightly coupled and integrated into a single distributed platform These systems open the door to a myriad of new and exciting applications in transportation health care

agriculture energy and many others The need for the tight integration of different components requirements and time scales means that the modeling analysis and design of these systems present new challenges We focus on two aspects of emerging systems architecture Firstly we investigate the presence of finite rate digital communication channels with delays in the feedback loop In this context we study event triggering strategies that utilize timing information by transmitting in a state dependent fashion The proposed event triggering strategies utilize the available communication resources more efficiently compared to existed time triggering setups Secondly the distributed nature of cyber physical systems and cloud robotics is their Achilles heel as it is a source of vulnerability to cyber attacks In this regard we introduce the problem of learning based attacks in these systems and we show how the controller can impede these attacks by superimposing a carefully crafted privacy enhancing signal upon its control policy

Access Control Models and Architectures For IoT and Cyber Physical Systems Maanak Gupta, Smriti Bhatt, Asma Hassan Alshehri, Ravi Sandhu, 2022-02-04 This book presents cybersecurity aspects of ubiquitous and growing IoT and Cyber Physical Systems It also introduces a range of conceptual theoretical and foundational access control solutions This was developed by the authors to provide an overall broader perspective and grounded approach to solve access control problems in IoT and CPS The authors discuss different architectures frameworks access control models implementation scenarios and a broad set of use cases in different IoT and CPS domains This provides readers an intuitive and easy to read set of chapters The authors also discuss IoT and CPS access control solutions provided by key industry players including Amazon Web Services AWS and Google Cloud Platform GCP It provides extensions of the authors proposed fine grained solutions with these widely used cloud and edge supported platforms This book is designed to serve the computer science and the cybersecurity community including researchers academicians and students Practitioners who have a wider interest in IoT CPS privacy and security aspects will also find this book useful Thanks to the holistic planning and thoughtful organization of this book the readers are expected to gain in depth knowledge of the state of the art access control architectures and security models for resilient IoT and CPS

An Efficient Platform and Communication Architecture for Event-triggered Cyber-physical Systems Felix Sutton, 2018 A Secured Architecture for Mitigating Distributed Denial of Service Attack Integrating Internet of Things and Cloud Computing Helen Parimala, 2023-01-09 Doctoral Thesis Dissertation from the year 2019 in the subject Computer Science IT Security grade 87 % Bharathidasan University language English abstract Internet of Things IoT and Cloud Computing play a vital role in the field of Information Technology The goal of IoT is to link objects of heterogeneous in nature to avail smart services and application anywhere anytime using any device Cloud Computing allows computer users to conveniently rent access to fully featured applications to software development and deployment environments and to computing infrastructure assets such as network accessible data storage and processing with its salient features of on demand self service broad network access resource pooling rapid elasticity and measured service Though the Cloud and IoT have emerged as independent technology

merging these two technologies brings renaissance in the field of future networks and in building smart environment This new evolvement is known as CloudIoT One of the important challenges in CloudIoT is security Challenges on the integration of the Cloud within IoT are to be a major bottleneck The integration of security mechanism and data privacy are also a major concern Any leakage of information from any of the CloudIoT could severely damage the privacy and authenticity of the users and data Researchers all over the world put on efforts in integrating smart CloudIoT services to satisfy the needs of the CloudIoT Users But no prominent architecture has been authenticated so far Hence it is imperative to design architecture to integrate CloudIoT smart services and applications to access smart services in a secured manner at anywhere anytime The major challenges in implementing this scenario are security factors such as authenticity confidentiality integrity and privacy In network security there are several types of attacks which can harm the network resources and services Distributed Denial of Service DDoS is one of the malicious attacks which can harm data communication in CoT potentially There is a problem that may render customers to withdraw from the cloud services A traditional DDoS attack aims at servers and or the bandwidth of a network or a website in order to make them unavailable to their intended users However attackers can generate DDoS attack to harm the cloud resources in the same way as the cloud has a huge pool of resources which are larger than attackers resources Communications Architectures & Protocols ,1983 **Cyber Physical System 2.0**
