Computational Text Analysis Soumya Raychaudhuri, 2006-01-26 This book brings together the two disparate worlds of computational text analysis and biology and presents some of the latest methods and applications to proteomics, sequence analysis, and gene expression data. Modern genomics generates large and comprehensive data sets, but their interpretation requires an understanding of a vast number of genes, their complex functions, and interactions. Keeping up with the literature on a single gene is a challenge itself; for thousands of genes, it is simply impossible. Here, Soumya Raychaudhuri presents the techniques and algorithms needed to access and utilize the vast scientific text, i.e., methods that automatically read the literature on all the genes. Including background chapters on the necessary biology, statistics, and genomics, in addition to practical examples of interpreting many different types of modern experiments, this book is ideal for students and researchers in computational biology, bioinformatics, genomics, statistics, and computer science.

Zakrajsek, 2023-07-03 The goal of teaching online is fundamentally the same as teaching face to face facilitating the learning of all students to the greatest extent possible This book differs from other books on online teaching in that in the process of offering guidance on course design and planning developing outcomes and appropriate engaging activities managing the workload and assessment the authors pay explicit attention throughout to the

distinct and diverse needs of students and offer effective strategies to accommodate them in a comprehensive and inclusive way by using the principles of Universal Design for Learning. By following those principles from the outset when planning a course, all students will benefit, and most particularly those whom the research shows have the greatest achievement gaps when taking online courses: males, first generation, and low income students; those from underrepresented minority groups; the academically underprepared students with disabilities; and those with limited online access or lacking readiness for online learning. Beyond good planning and design, Kelly and Zakrajsek offer ideas for creating inclusive course environments and activities such as using culturally appropriate content and making it accessible in multiple formats. They also share methods to foster faculty learner interaction and increase personal connections with students and among students through group activities or learning communities, which are so critical to motivation and success. Faculty new to online teaching as well as more experienced readers will find a wealth of practical guidance on developing and honing both fully online and blended courses, and as importantly, a wealth of proven ideas to help the new generation of students with diverse needs to succeed.

Take Control of the Mac Command Line with Terminal, 3rd Edition Joe Kissell, 2026-01-08. Learn how to unleash your inner Unix geek. Version 3.5 updated January 8, 2026. Release your inner geek and harness the power of the Unix underpinnings of macOS. This book from Joe Kissell explains everything you need to know to become comfortable working on the command line in Terminal and provides numerous recipes for performing useful tasks. If you've ever thought you should learn to use the Unix command line that underlies macOS or felt at sea when typing commands into Terminal, Joe Kissell is here to help. With this 229-page book, you'll become comfortable working on the Mac's command line, starting with the fundamentals and adding more advanced topics as your knowledge increases. Joe includes 67 real-life recipes for tasks that are best done from the command line, as well as directions for working with permissions, carrying out grep-based searches, creating shell scripts, and installing Unix software. The book begins by teaching you these core concepts: The differences among Unix, a command line, a shell, and Terminal. Exactly how commands, arguments, and flags work. The basics of Terminal's interface and how to customize it. Next, it's on to the command line where you'll learn: How to navigate your Mac's directory structure. Basic file management: creating, copying, moving, renaming, opening, viewing, and deleting files. Creating symbolic links. The types of command line programs. How to start and stop a command line program. How to edit a text file in nano. How to customize your prompt and other shell defaults. The importance of your PATH and how to change it if you need to. How to get help. Joe goes way beyond telling you to read the man pages. You'll extend your skills as you discover how to: Create basic shell scripts to automate repetitive tasks. Make shell scripts that have variables, user input, conditional statements, loops, and math. See which programs are running and what system resources they're consuming. Quit programs that refuse to quit normally. Enable the command line to interact with the Finder. Control another Mac via its command line with ssh. Understand and change an item's permissions, owner, and group. Run commands as the root user using sudo. Handle output with pipe or
