Modeling and Optimization of Interdependent Energy Infrastructures Wei Wei, Jianhui Wang, 2019-10-22 This book opens up new ways to develop mathematical models and optimization methods for interdependent energy infrastructures ranging from the electricity network natural gas network district heating network and electrified transportation network The authors provide methods to help analyze design and operate the integrated energy system more efficiently and reliably and constitute a foundational basis for decision support tools for the next generation energy network Chapters present new operation models of the coupled energy infrastructure and the application of new methodologies including convex optimization robust optimization and equilibrium constrained optimization Four appendices provide students and researchers with helpful tutorials on advanced optimization methods Basics of Linear and Conic Programs Formulation Tricks in Integer Programming Basics of Robust Optimization Equilibrium Problems This book provides theoretical foundation and technical applications for energy system integration and the interdisciplinary research presented will be useful to readers in many fields including electrical engineering civil engineering and industrial engineering

Linear Matrix Inequalities in System and Control Theory Stephen Boyd, Laurent El Ghaoui, Eric Feron, Venkataramanan Balakrishnan, 1994-01-01 In this book the authors reduce a wide variety of problems arising in system and control theory to a handful of convex and quasiconvex optimization problems that involve linear matrix inequalities These optimization problems can be solved using recently developed numerical algorithms that not only are polynomial time but also work very well in practice the reduction therefore can be considered a solution to the original problems This book opens up an important new research area in which convex optimization is combined with system and control theory resulting in the solution of a large number of previously unsolved problems

Engineering Mathematics and Artificial Intelligence Herb Kunze, Davide La Torre, Adam Riccoboni, Manuel Ruiz Galán, 2023-07-26 The fields of Artificial Intelligence AI and Machine Learning ML have grown dramatically in recent years with an increasingly impressive spectrum of successful applications This book represents a key reference for anybody interested in the intersection between mathematics and AI ML and provides an overview of the current research streams Engineering Mathematics and Artificial Intelligence Foundations Methods and Applications discusses the theory behind ML and shows how mathematics can be used in AI The book illustrates how to improve existing algorithms by using advanced mathematics and offers cutting edge AI technologies The book goes on to discuss how ML can support mathematical modeling and how to simulate data by using artificial neural networks Future integration between ML and complex mathematical techniques is also highlighted within the book This book is written for researchers practitioners engineers and AI consultants

Bazaraa,Hanif D. Sherali,C. M. Shetty,2014-08-22 As the Solutions Manual this book is meant to accompany the main title Nonlinear Programming Theory and Algorithms Third Edition This book presents recent developments of key topics in nonlinear programming NLP using a logical and self contained format The volume is divided into three sections convex analysis optimality conditions and dual computational techniques Precise statements of algorithms are given along with convergence analysis Each chapter contains detailed numerical examples graphical illustrations and numerous exercises to aid readers in understanding the concepts and methods discussed **The Far East Journal of Mathematical Sciences** ,1996 *Scientific and Technical Aerospace Reports* ,1981 **Convex Analysis and Optimization** Dimitri Bertsekas,Angelina Nedic,Asuman Ozdaglar,2003-03-01 A uniquely pedagogical insightful and rigorous treatment of the analytical geometrical foundations of optimization The book provides a comprehensive development of convexity theory and its rich applications in optimization including duality minimax saddle point theory Lagrange multipliers and Lagrangian relaxation nondifferentiable optimization It is an excellent supplement to several of our

books Convex Optimization Theory Athena Scientific 2009 Convex Optimization Algorithms Athena Scientific 2015 Nonlinear Programming Athena Scientific 2016 Network Optimization Athena Scientific 1998 and Introduction to Linear Optimization Athena Scientific 1997

Aside from a thorough account of convex analysis and optimization the book aims to restructure the theory of the subject by introducing several novel unifying lines of analysis including

- 1 A unified development of minimax theory and constrained optimization duality as special cases of duality between two simple geometrical problems
- 2 A unified development of conditions for existence of solutions of convex optimization problems conditions for the minimax equality to hold and conditions for the absence of a duality gap in constrained optimization
- 3 A unification of the major constraint qualifications allowing the use of Lagrange multipliers for nonconvex constrained optimization using the notion of constraint pseudonormality and an enhanced form of the Fritz John necessary optimality conditions

Among its features the book a

- a Develops rigorously and comprehensively the theory of convex sets and functions in the classical tradition of Fenchel and Rockafellar
- b Provides a geometric highly visual treatment of convex and nonconvex optimization problems including existence of solutions optimality conditions Lagrange multipliers and duality
- c Includes an insightful and comprehensive presentation of minimax theory and zero sum games and its connection with duality
- d Describes dual optimization the associated computational methods including the novel incremental subgradient methods and applications in linear quadratic and integer programming
- e Contains many examples illustrations and exercises with complete solutions about 200 pages
