Conjuring Science : Scientific Symbols and Cultural Meanings in American Life Christopher P. Toumey, 1996

Conjuring Science Sofie Lachapelle, 2015-10-07 *Conjuring Science* explores the history of magic shows and scientific entertainment. It follows the frictions and connections of magic and science as they occurred in the world of popular entertainment in France from the mid eighteenth to the early twentieth century. It situates conjurers within the broader culture of science and argues that stage magic formed an important popular conduit for science and scientific enthusiasm during this period. From the scientific recreations of the fairs to the grand illusions of the theatre stage and the development of early cinema, conjurers used and were inspired by scientific and technological innovations to create illusions that provoke a sense of wonder and often even instruct their audience. In their hands, science took on many meanings and served different purposes: it was a set of pleasant facts and recreational demonstrations upon which to draw; it was the knowledge presented in various scientific lectures accompanied by optical projections; at magic shows, it was the techniques necessary to create illusions and effects on stage and later on at the cinema; and it was a way to separate conjuring from the deceit of mediums, mystical showmen and quacks in order to gain a better standing within an increasingly scientifically minded society.

Leadership in Science and Technology: A Reference Handbook William Sims Bainbridge, 2011-10-20 Tackling 100 key topics and providing case studies in the area of science and technology leadership, this reference handbook is an essential resource for students in this area. *Cultural Boundaries of Science* Thomas F. Gieryn, 1999-01-15 This text argues that an explanation for the cultural authority of science lies where scientific claims leave laboratories and enter boardrooms and living rooms. Here one uses maps to decide who to believe: cultural maps demarcating science from pseudoscience, ideology, faith or nonsense.

Introducing the Chemical Sciences Chemical Heritage Foundation, 1997 An introductory guide that is designed particularly for teachers and their students but is useful in many other contexts. This new edition lists reference works, histories of science and technology, histories of the chemical sciences and industries, including company histories, autobiographies and biographies, edited classical texts and journals.

Science and the Media Massimiano Bucchi, 2012-10-12 In the days of global warming and BSE, science is increasingly a public issue. This book provides a theoretical framework which allows us to understand why and how scientists address the general public. The author develops the argument that turning to the public is not simply a response to inaccurate reporting by journalists or to public curiosity, nor a wish to gain recognition and additional funding. Rather, it is a tactic to which the scientific community are pushed by certain internal crisis situations. Bucchi examines three cases of scientists turning to the public: the cold fusion case, the COBE Big Bang issue, and Louis Pasteur's public demonstration of the anthrax vaccine, a historical case of public science. Finally, Bucchi presents his unique model of communications between science and the public, carried out through the media. This is a thoughtful and wide-ranging treatment of complex contemporary issues touching upon the history and sociology of science.

communication and media studies Bucchi's theories on scientific communication in the media are a valuable contribution to the current debate on this subject
