

Implement Traffic Policing

I. Step-by-step

1. Define what traffic to be policed – Access Control List

```
acl name acl-name number no.  
rule 5 permit ip source ip-address wildcard  
rule 10 deny ip destination ip-address wildcard
```

- Mặc định mỗi rule cách nhau 5 bước, rule nhỏ hơn sẽ được check trước.

2. Configure a traffic classifier.

```
traffic classifier classifier-name [operator (and/or)] [precedence precedence-value]  
if-match { acl-number | acl-name }
```

- ACL must be configured first

Resource Management in Future Internet

Vladimir Poulikov, Ramjee Prasad, 2022-09-01 Future Internet and Internet of Things set out a new vision for connectivity real time applications and services. Data procured from the use of a large number of heterogeneous physical and virtual devices must be real time processed and analyzed for the goal of effective resource management and control while maintaining the required performance and quality of service. In addition the development of the communication networks towards heterogeneous and new generation broadband connectivity brings up new requirements towards the way of managing and controlling of the available resources. Thus for the effective resource management in future internet novel approaches must be proposed and developed. It could be seen that recently a considerable amount of effort has been devoted on behalf of industry and academia towards the research and design of methods for effective management of resources in internet and multimedia communications. The book reviews some specific topics in the field of future internet and internet technologies that are closely related to the issue of finding effective solutions for the management of resources and performance. Technical topics discussed in the book include Future Internet Technologies, Internet of things, Multimedia Networks, Wireless Access Networks, Software Communications Positioning and Localization in Communications, Resource Management, Resource Management in future Internet is recommended for specialists working in the field of information and communication industries as well as academic staff and researchers working in the field of multimedia communications and telecommunication networks.

Designing Switch/Routers James Awuya, 2022-10-04 This book focuses on the design goals i.e. key features, architectures and practical applications of switch routers in IP networks. The discussion includes some practical design examples to illustrate how switch routers are designed and how the key features are implemented. Designing Switch Routers Architectures and Applications explains the design and architectural considerations as well as the typical processes and steps used to build practical switch routers. The author describes the components of a switch router that are used to configure, manage and monitor it. This book discusses the advantages of using Ethernet in today's networks and why Ethernet continues to play a large role in Local Area Network (LAN), Metropolitan Area Network (MAN) and Wide Area Network (WAN) design. The author also explains typical networking applications of switch routers, particularly in enterprise and internet service provider (ISP) networks. This book provides a discussion of the design of switch routers and is written to appeal to undergraduate and graduate students, engineers and researchers in the networking and telecom industry as well as academics and other industry professionals.
