need of expanding production Credit is needed for investment and during times of a boom it is easily made available Often new financial instruments come into play as well as the deregulation of financial markets to meet the demand for credit Businesses can expand further which results in ever increasing income and greater expectations about the future Creditors become less risk averse and grant loans to individuals or firms that would have not met the necessary requirements before People feel richer since their wealth is re classified so that their assets and property are all of the sudden worth more for no realistic reason renovate a home for example which would account for an increase in value In combination with low interest rates more and more investments and purchases are financed through excess leverage creating a vicious cycle of easy credit money illusion and the adjustment of fundamental values Great hikes in the markets are considered as a result of the new economy that has been created Historical levels of the markets and where the level of fundamentals should really be are completely ignored Currently we can only assess bubbles in retrospective psychological factors which may help to explain the unexplainable are hardly considered in basic economic models The only thing that is certain is that bubbles always burst

Classical Selections on Great Issues Lynchburg College,1982-05-21 **History of Economic Theory** T. Negishi,1989-06-15 This volume aims to interest students of modern economic theory in the history of economics For this purpose past economic theories are considered from the point of view of current economic theories and translated if possible and necessary into mathematical models It is emphasized that the currently dominating mainstream theory is not the only possible theory and that there are many past theories which have important significance to the advancement of economic theory in the present situation or will have it in the near future After a brief discussion on the history of economics from the point of view of contemporary economic theory a bird s eye view of the historical development of economics is given so that readers can see the significance of topics to be discussed in subsequent chapters in a proper historical perspective These topics are carefully chosen to show not only what great economists in the past contributed to the development of economics but also what suggestions for solving our own current problems we can obtain by reworking problems they had to face The book can be used in advanced undergraduate as well as graduate classes on the history of economics Mathematical techniques used can easily be understood by advanced undergraduates of economics major since some models constructed originally by contemporary mathematical economists are carefully reformulated without losing the essence basic calculus and the rudiments of linear algebra being sufficient for understanding Economic Consequences of Tax Simplification ,1985 Implications of Alternative Reduced Acreage Strategies Under Varying Climate Conditions for the Soybean, and
