Constraint Grammar Natural Language Processing:

Constraint Grammar Fred Karlsson,1995 No detailed description available for Constraint Grammar [Constraint Solving and Language Processing](#) Henning Christiansen,Peter Rossen Skadhauge,Jørgen Villadsen,2005-05-30 This volume contains selected and thoroughly revised papers plus contributions from invited speakers presented at the First International Workshop on C straint Solving and Language Processing held in Roskilde Denmark September 1 3 2004 Constraint Programming and Constraint Solving in particular Constraint Logic Programming appear to be a very promising platform perhaps the most promising present platform for bringing forward the state of the art in natural language processing this due to the naturalness in speci cation and the direct relation to e cient implementation Language in the present context may refer to written and spoken language formal and semiformal language and even general input data to multimodal and pervasive systems which can be handled in very much the same ways using constraint programming The notion of constraints with slightly di ering meanings apply in the characterization of linguistic and cognitive phenomena in formalized linguistic models as well as in implementation oriented frameworks Programming techniques for constraint solving have been and still are in a period with rapid development of new e cient methods and paradigms from which language processing can profit A common metaphor for human language processing is one big constraint solving process in which the different phases take place in parallel and with mutual cooperation which ts quite well with current constraint programming paradigms

Constraints and Language Philippe Blache,Henning Christiansen,Verónica Dahl,2014-10-16 The concept of constraint is widely used in linguistics computer science and psychology However its implementation varies widely depending on the research domain namely language description knowledge representation cognitive modelling and problem solving These various uses of constraints offer complementary views on intelligent mechanisms For example in depth descriptions implementing constraints are used in linguistics to filter out syntactic or discursive structures by means of dedicated description languages and constraint ranking In computer science the constraint programming paradigm views constraints as a whole which can be used for example to build specific structures Finally in psycholinguistics experiments are carried out to investigate the role of constraints within cognitive processes both in comprehension and production with various applications such as dialog modelling for people with disabilities In this context Constraints and Language builds an extended overview of the use of constraints to model and process language This book will be useful for researchers willing to get a grip on the various uses of constraints in natural language processing and also as a class book for academic staff who want to set up advanced courses around the concept of constraint based natural language processing

Natural Language Processing - NLP 2000 Dimitris N. Christodoulakis,2003-06-26 This volume contains the papers prepared for the 2nd International Conference on Natural Language Processing held 2 4 June in Patras Greece The conference program features invited talks and submitted papers covering a wide range of NLP areas text segmentation morphological analysis lexical

knowledge acquisition and representation grammar formalism and s tactic parsing discourse analysis language generation man machine interaction machine translation word sense disambiguation and information extraction The program committee received 71 abstracts of which unfortunately no more than 50% could be accepted Every paper was reviewed by at least two reviewers The fairness of the reviewing process is demonstrated by the broad spread of institutions and countries represented in the accepted papers So many have contributed to the success of the conference The primary credit of course goes to the authors and to the invited speakers By their papers and their inspired talks they established the quality of the conference Secondly thanks should go to the referees and to the program committee members who did a thorough and conscientious job It was not easy to select the papers to be presented Last but not least my special thanks to the organizing committee for making this conference happen **Constraint Solving and Language Processing** Denys Duchier, Yannick Parmentier, 2013-10-12 The Constraint Solving and Language Processing CSLP workshop considers the role of constraints in the representation of language and the implementation of language processing applications This theme should be interpreted inclusively it includes contributions from linguistics computer science psycholinguistics and related areas with a particular interest in interdisciplinary perspectives Constraints are widely used in linguistics computer science and psychology How they are used however varies widely according to the research domain knowledge representation cognitive modelling problem solving mechanisms etc These different perspectives are complementary each one adding a piece to the puzzle

the many obstacles in the interaction between human and computer In this endeavor finding automated techniques to parse the complexities of human grammar is a premier problem tackled by human interface researchers The intricacy of human grammar poses problems not only of accuracy but also of efficiency This book investigates programs for automatic analysis and production of written human language These specialized programs use knowledge about the structure and meaning of human language in the form of grammars Various techniques are proposed which focus on solutions for practical problems in processing of constraint logic grammars The solutions are all based on the automatic adaptation or compilation of a grammar rather than a modification of the processing algorithm used As such they allow the grammar writer to abstract over details of grammar processing and in many cases enable more efficient processing *Constraint-based Grammar Formalisms* Stuart M. Shieber,1992 Constraint Based Grammar Formalisms provides the first rigorous mathematical and computational basis for this important area

Szpakowicz,1990 [Fifth Conference on Applied Natural Language Processing](#) Association for Computational Linguistics,1997 [On Memory Limitations in Natural Language Processing](#) Kenneth Ward Church,1982 This paper proposes a welcome hypothesis a computationally simple device is sufficient for processing natural language Traditionally it has been argued that processing natural language syntax requires very powerful machinery Many engineers have come to this rather grim conclusion almost all working parsers are actually Turing Machines TM For example Woods specifically designed his Augmented Transition Networks ATN s to be Turing Equivalent If the problem is really as hard as it appears then the only solution is to grin and bear it Our own position is that parsing acceptable sentences is simpler because there are constraints on human performance that drastically reduce the computational requirements time and space bounds Although ideal linguistic competence is very complex this observation may not apply directly to a real processing problem such as parsing By including performance factors it is possible to simplify the computation We will propose two performance limitations bounded memory and deterministic control which have been incorporated in a new parser YAP
