**Materials Science in Construction** Ash Ahmed,John Sturges,2015 Materials Science in Construction explains the science behind the properties and behaviour of construction s most fundamental materials metals cement and concrete polymers timber bricks and blocks glass and plaster In particular the critical factors affecting in situ materials are examined such as deterioration and the behaviour and durability of materials under performance An accessible easy to follow approach makes this book ideal for all diploma and undergraduate students on construction related courses taking a module in construction materials

**Construction Science & Materials 2** John Fincham,David Watkins,1981 *Construction Materials* Leonid Iosifovich Dvorkin,2010 The modern building materials science along with the constructional characteristics of materials includes the theoretical concepts allowing to predict properties of materials and to operate them actively The theoretical concepts of construction materials science are based on the complex of the physical and chemical geological mineralogical and other sciences studying a structure and properties of material objects Construction materials science is inseparably connected with technology of materials and products methodology of their quality indicators and testing This book discusses how scientific and technical progress actively affects the development of construction materials science

Building Science Abstracts ,1930 *From Materials Science to Construction Materials Engineering* RILEM.,1987 Building ,1909 **High-performance Construction Materials** Caijun Shi,2008 This book describes a number of high performance construction materials including concrete steel fiber reinforced cement fiber reinforced plastics polymeric materials geosynthetics masonry materials and coatings It discusses the scientific bases for the manufacture and use of these high performance materials Testing and application examples are also included in particular the application of relatively new high performance construction materials to design practice Most books dealing with construction materials typically address traditional materials only rather than high performance materials and as a consequence do not satisfy the increasing demands of today s society On the other hand books dealing with materials science are not engineering oriented

with limited coverage of the application to engineering practice This book is thus unique in reflecting the great advances made on high performance construction materials in recent years This book is appropriate for use as a textbook for courses in engineering materials structural materials and civil engineering materials at the senior undergraduate and graduate levels It is also suitable for use by practice engineers including construction materials mechanical and civil engineers

Architecture--art Or Profession? Mark Crinson, Jules Lubbock, 1994 Architects are perhaps the

most important people involved in shaping the built environment so the ideas they receive in the course of their training are a major influence upon the buildings and cities of the future Crinson and Lubbock present a bold new perspective on the evolution of the British architect from Wren to post modernism and beyond and provide the first general history of architectural education making an important contribution to current debates The Prince of Wales views on modern architecture and the need for a change in the way architects are trained has attracted enormous support from the public resulting in architects and their training being under the spotlight more than ever The drive to define and promote the architectural profession that began in the eighteenth century and reached its apogee in the 1960s has now begun to unravel How has this happened What relation does an architect s education have to the built environment What lessons are there from the past This book will be of interest to students lecturers and all those interested in the debates around contemporary architecture
