*Structural Analysis of Historical Constructions* Yohei Endo, Toshikazu Hanazato, 2023-09-03 This book gathers the peer reviewed papers presented at the 13th International Conference on Structural Analysis of Historical Constructions SAHC held in Kyoto Japan on September 12 15 2023 It highlights the latest advances and innovations in the field of conservation and restoration of historical and heritage structures The conference topics encompass history of construction and building technology theory and practice of conservation inspection methods non destructive techniques and laboratory testing numerical modeling and structural analysis management of heritage structures and conservation strategies structural health monitoring repair and strengthening strategies and techniques vernacular constructions seismic analysis and retrofit vulnerability and risk analysis resilience of historic areas to climate change and hazard events durability and sustainability As such the book represents an invaluable up to the minute tool providing an essential overview of conservation of historical constructions and offers an important platform to engineers architects archeologists and geophysicists Chapter Guidelines for Seismic Retrofitting of Earthen Historic Buildings in Peru and Latin America is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com) [Autonomous Assembly](#) Skylar Tibbits, 2017-11-20 We are now on the brink of a new era in construction that of autonomous assembly For some time the widespread adoption of robotic and digital fabrication technologies has made it possible for architects and academic researchers to design non standard highly customised structures These technologies have largely been limited by scalability focusing mainly on top down bespoke fabrication projects such as experimental pavilions and structures Autonomous assembly and bottom up construction techniques hold the promise of greater scalability adaptability and potentially evolved design possibilities By capitalising on the advances made in swarm robotics the collective construction of the animal insect kingdom and advances in physical computational programmable materials or self assembly architects and designers are now able to build from the bottom up This issue presents future scenarios of autonomous assembly by highlighting the viability of decentralised collective assembly systems demonstrating the potential to deliver reconfigurable and adaptive solutions Contributors include Marcelo Coelho Andong Liu Robin Meier Kieran Murphy and Heinrich Jaeger Radhika Nagpal and Kirstin Petersen and Zorana Zeravcic Featured architects Aranda Lasch Arup Philippe Block Gramazio Kohler Architects Iba ez Kim Achim Menges Caitlin Mueller Jose Sanchez Athina Papadopoulou and Jared Laucks and Skylar Tibbits **The Ecologies of the Building Envelope** Alejandro Zaera-Polo, Jeffrey Anderson, 2021-05-11 The Ecologies of the Envelope theorizes the building envelope as a literal embodiment of the social political technological and economic contingencies which have become embedded within it over the last century analyzing the historical lineages heroes and villains that helped define the complex material ecologies we see within the envelope today While the facade is one of the most thoroughly theorized elements of architecture it is also one of the most questioned since the end of the 19th century Within the discipline of architecture the

traditional understanding of the facade focuses primarily on semiotic and compositional operations such as proportional laws and linguistic codes which are deployed on the building's surface. In contrast to this, our material and environmental theory of the envelope proposes that the exponential development of building technologies since the mid 19th century coupled with new techniques of management and regulation have diminished the compositional and ornamental capacities of the envelope in favor of material quantitative and technical performances. Rather than producing a stylistic analysis of the facade, we investigate the historical lineages of the performances, components, assembly types and material entanglements that constitute the contemporary building envelope. *'For My Descendants and Myself, a Nice and Pleasant Abode'* - Agency,

*Micro-history and Built Environment* Göran Tagesson, Per Cornell, Mark Gardiner, Liz Thomas, Katherine Weikert, 2020-12-10

This volume examines how people have been making, using and transforming buildings and built environments and how buildings have been perceived from the Byzantine period to modern times. It also considers a diversity of built constructions including dwellings and public buildings, sheds and manor houses and secular and sacral structures. **Waste Matters**

Nikole Bouchard, 2020-12-01 For thousands of years humans have experimented with various methods of waste disposal from burning and burying to simply packing up and moving in search of an unscathed environment. Habits of disposal are deeply ingrained in our daily lives so casual and continual that we rarely ever stop to ponder the big picture effects on social, spatial and ecological orders. Rethinking the ways in which we produce, collect, discard and reuse our waste, whether it's materials, spaces or places, is essential to ensure a more feasible future. *Waste Matters: Adaptive Reuse for Productive Landscapes* presents a series of historical and contemporary design ideas that reimagine a range of repurposed materials at diverse scales and in various contexts by exploring methods of hacking, disassembly, reassembly, recycling, adaptive reuse and preservation of the built environment. *Waste Matters* will inspire designers to sample and rearrange bits of artifacts from the past and present to produce culturally relevant and ecologically sensitive materials, objects, architecture and environments.

**Design and Connectivity** Joana Valdez-Tullett, 2019 *Archaeology of Prehistoric Art Volume 1: Atlantic Rock Art* is a rock art tradition which includes emblematic motifs such as cup marks, cups and rings and lines known to several countries on the Atlantic seaboard. *Design and Connectivity* springs from an inter-regional study of this tradition based on an original and innovative methodology applied to an empirical dataset. The project builds on Richard Bradley's work investigating differences and similarities in Atlantic Art over study areas in five countries: Scotland, England, Ireland, Spain and Portugal. It applies a multi-scalar methodology developed under the principles of Relational Ontology and Assemblage Theory, providing a dynamic perspective on the empirical data. A thorough categorical scheme was scrutinised using a Presence-Absence Matrix, spatial analysis, fieldwork and GIS, and the development of Social Network Analysis (SNA) to relate and explore the relationships and connectivity between study areas. Concepts of developmental psychology support the idea of intentional teaching and cultural transmission. **Structures and Architecture** Paulo J. Cruz, 2016-10-14 Although the disciplines of

architecture and structural engineering have both experienced their own historical development their interaction has resulted in many fascinating and delightful structures To take this interaction to a higher level there is a need to stimulate the inventive and creative design of architectural structures and to persuade architects and structural engineers to further collaborate in this process exploiting together new concepts applications and challenges This set of book of abstracts and full paper searchable CD ROM presents selected papers presented at the 3rd International Conference on Structures and Architecture Conference ICSA2016 organized by the School of Architecture of the University of Minho Guimar es Portugal July 2016 to promote the synergy in the collaboration between the disciplines of architecture and structural engineering
