

Calculating pH

How will it be used for the concentration differences here?

Why?

As buffers and other substances control pH in a system, it is a way to regulate the acidity or basicity of a cell. Also, this property is also controlled through pH levels in sports as athletes regulate their acid-base balance after an extended pH value. Also, water is usually being consumed. For example, blood is pH 7.4 or around, before it is added, but after it is added, it is pH 7.35. This is the difference between pH in a particular system.
