dentists typically is often in the form of brochures comprised of very general information and line drawings which are often simplistic and do not adequately familiarize them about dental implants As implantologists by far the most common questions that I have been asked by patients that are thinking of receiving dental implants is what they feel like when placed how they will work and their overall safety and effectiveness In order to try to answer these questions we put together some information on dental implants so that people are made familiar with the implant components how they are placed and how they will function in the mouth We also sought to provide information regarding the rationale behind the implant selection process and surgical aspects of implant placement as well as provide a history and also recent advances that are associated with implant dentistry Since dental implants are comprised of two components the root component that is placed surgically and the restorative component that represents the crown of a tooth In order to present information on both aspects of implant therapy information on both aspects of therapy are provided in order to familiarize patients with information on not only dental implant surgery but also on implant restorations Line drawings and case studies including before and after pictures of both surgical and restorative procedures are included in order to provide information for patients about the dental implant procedure The goal of this book is to provide vital information about dental implants in such a way that will aid patients in deciding whether or not to have dental implants
