

**Fig 3.** Deployment sequence of NASA's STAC-BEAM geometry model.

The team aims to define a morphological design method that can generate deployable structures based on crystallographic symmetry and on variants of three NASA structures, the PACTRUSS, the X-BEAM and the STAC-BEAM. The latter two are used as extendable support structures for platforms such as solar concentrators and phased arrays. In order to define their structural morphology the team develops a four-letter notation (t, b, v, d) that corresponds to the four structural component groups of a cubic cell. The first letter (t) corresponds to the top horizontal members, the second (b) to the bottom horizontal members, the third (v) to the vertical members and the fourth (d) to the diagonal members.

The notation then describes whether the member is rigid (r) or hinged (h). The morphological notation for the PACTRUSS seen in figure 1 is (h, h, r, h) (representing hinged top members, hinged bottom members, rigid vertical members and hinged diagonal members).

Handbook of Research on Methodologies for Design and Production Practices in Interior Architecture Garip, Ervin,Garip, S. Banu,2020-11-20 Studio environments can be defined as multi dimensional integrated production spaces where basic design trainings take place and where design issues including theoretical notions such as sociological political phenomenological and other dimensions are discussed Present approaches within the literature and social media on this topic gives cause for students to evaluate their future professions over finished and pictorial products rather than ontological and processual means While there are many resources available on the present approaches of aesthetics and visuality of interior spaces there is not much research available on new design methodologies related design processes and new applied methods in interior architecture Based on different contexts these methods of design practice have the potential to enrich design processes and create multiple discussion platforms within project studios as well as other design media These different representations and narration methods for research in the context of interior architecture can be effectively used in design processes The Handbook of Research on Methodologies for Design and Production Practices in Interior Architecture proposes new design methodologies and related design processes and introduces new applied method approaches while presenting alternative methods that have been used within design studios in the field of interior architecture The chapters deal with four major sections the design process and interdisciplinary approaches then scenario development and content followed by material texture and atmosphere and concluding with new approaches to design While highlighting topics such as spatial perception design strategies architectural atmosphere and design thinking this book is of interest to architects interior designers practitioners stakeholders researchers academicians and students looking for advanced research on the new design methodologies and processes for interior architecture
