Dependability Benchmarking For Computer Systems:

Dependability Benchmarking for Computer Systems Karama Kanoun, Lisa Spainhower, 2008-10-03 A comprehensive collection of benchmarks for measuring dependability in hardware software systems As computer systems have become more complex and mission critical it is imperative for systems engineers and researchers to have metrics for a system s dependability reliability availability and serviceability Dependability benchmarks are useful for guiding development efforts for system providers acquisition choices of system purchasers and evaluations of new concepts by researchers in academia and industry This book gathers together all dependability benchmarks developed to date by industry and academia and explains the various principles and concepts of dependability benchmarking It collects the expert knowledge of DBench a research project funded by the European Union and the IFIP Special Interest Group on Dependability Benchmarking to shed light on this important area It also provides a large panorama of examples and recommendations for defining dependability benchmarks Dependability Benchmarking for Computer Systems includes contributions from a credible mix of industrial and academic sources IBM Intel Microsoft Sun Microsystems Critical Software Carnegie Mellon University LAAS CNRS Technical University of Valencia University of Coimbra and University of Illinois It is an invaluable resource for engineers researchers system vendors system purchasers computer industry consultants and system integrators **Dependability**

Processing Council TPC represent the most successful benchmarking initiative of all computer industry. However as performance evaluation has been the main focus there are no dependability benchmarks for OLTP systems. This book addresses the dependability benchmarking problem and presents the DBench OLTP benchmark. This benchmark specifies the measures and all components required to evaluate and compare performance and dependability in typical transactional systems. The use of DBench OLTP is demonstrated through the evaluation and comparison of several systems that represent real alternatives for typical transactional environments such as many e commerce applications.
