Dependency Parsing Dependency Parsing:

Dependency Parsing Sandra Kübler,Ryan McDonald,Joakim Nivre,2022-05-31 Dependency based methods for syntactic parsing have become increasingly popular in natural language processing in recent years This book gives a thorough introduction to the methods that are most widely used today After an introduction to dependency grammar and dependency parsing followed by a formal characterization of the dependency parsing problem the book surveys the three major classes of parsing models that are in current use transition based graph based and grammar based models It continues with a chapter on evaluation and one on the comparison of different methods and it closes with a few words on current trends and future prospects of dependency parsing The book presupposes a knowledge of basic concepts in linguistics and computer science as well as some knowledge of parsing methods for constituency based representations Table of Contents Introduction Dependency Parsing Transition Based Parsing Graph Based Parsing Grammar Based Parsing Evaluation Comparison Final Thoughts   *Inductive Dependency Parsing* Joakim Nivre,2006-08-05 This book describes the framework of inductive dependency parsing a methodology for robust and efficient syntactic analysis of unrestricted natural language text Coverage includes a theoretical analysis of central models and algorithms and an empirical evaluation of memory based dependency parsing using data from Swedish and English A one stop reference to dependency based parsing of natural language it will interest researchers and system developers in language technology and is suitable for graduate or advanced undergraduate courses   *Trends in Parsing Technology* Harry Bunt,Paola Merlo,Joakim Nivre,2010-10-06 Computer parsing technology which breaks down complex linguistic structures into their constituent parts is a key research area in the automatic processing of human language This volume is a collection of contributions from leading researchers in the field of natural language processing technology each of whom detail their recent work which includes new techniques as well as results The book presents an overview of the state of the art in current research into parsing technologies focusing on three important themes dependency parsing domain adaptation and deep parsing The technology which has a variety of practical uses is especially concerned with the methods tools and software that can be used to parse automatically Applications include extracting information from free text or speech question answering speech recognition and comprehension recommender systems machine translation and automatic summarization New developments in the area of parsing technology are thus widely applicable and researchers and professionals from a number of fields will find the material here required reading As well as the other four volumes on parsing technology in this series this book has a breadth of coverage that makes it suitable both as an overview of the field for graduate students and as a reference for established researchers in computational linguistics artificial intelligence computer science language engineering information science and cognitive science It will also be of interest to designers developers and advanced users of natural language processing systems including applications such as spoken dialogue text mining multimodal human computer interaction and semantic web technology

Semi-Supervised Dependency Parsing Wenliang Chen,Min Zhang,2015-07-16 This book presents a comprehensive overview of semi supervised approaches to dependency parsing Having become increasingly popular in recent years one of the main reasons for their success is that they can make use of large unlabeled data together with relatively small labeled data and have shown their advantages in the context of dependency parsing for many languages Various semi supervised dependency parsing approaches have been proposed in recent works which utilize different types of information gleaned from unlabeled data The book offers readers a comprehensive introduction to these approaches making it ideally suited as a textbook for advanced undergraduate and graduate students and researchers in the fields of syntactic parsing and natural language processing   Inductive Dependency Parsing Joakim Nivre,2006-06-28 This book describes the framework of inductive dependency parsing a methodology for robust and efficient syntactic analysis of unrestricted natural language text Coverage includes a theoretical analysis of central models and algorithms and an empirical evaluation of memory based dependency parsing using data from Swedish and English A one stop reference to dependency based parsing of natural language it will interest researchers and system developers in language technology and is suitable for graduate or advanced undergraduate courses   *Dependency Parsing* Norman M. Fraser,1993   Advances in Discriminative Dependency Parsing Terry Y. Koo,2010 Achieving a greater understanding of natural language syntax and parsing is a critical step in producing useful natural language processing systems In this thesis we focus on the formalism of dependency grammar as it allows one to model important head modifier relationships with a minimum of extraneous structure Recent research in dependency parsing has highlighted the discriminative structured prediction framework McDonald et al 2005a Carreras 2007 Suzuki et al 2009 which is characterized by two advantages first the availability of powerful discriminative learning algorithms like log linear and max margin models Lafferty et al 2001 Taskar et al 2003 and second the ability to use arbitrarily defined feature representations This thesis explores three advances in the field of discriminative dependency parsing First we show that the classic Matrix Tree Theorem Kirchhoff 1847 Tutte 1984 can be applied to the problem of non projective dependency parsing enabling both log linear and max margin parameter estimation in this setting Second we present novel third order dependency parsing algorithms that extend the amount of context available to discriminative parsers while retaining computational complexity equivalent to existing second order parsers Finally we describe a simple but effective method for augmenting the features of a dependency parser with information derived from standard clustering algorithms our semi supervised approach is able to deliver consistent benefits regardless of the amount of available training data   **Mastering Text Analytics** Shailendra Kadre,Shailesh Kadre,Subhendu Dey,2025-08-26 This book is a comprehensive guide to mastering Natural Language Processing NLP a rapidly growing field in AI powered text and data analytics It equips you with tools and techniques to extract valuable insights from both structured and unstructured data enabling you to uncover insights beyond the reach of traditional data analysis methods and stay competitive in this evolving domain The book starts with foundational

Sandra Kübler,Jelena Prokić,2006 In recent years research in parsing has extended in several new directions One of these directions is concerned with parsing languages other than English Treebanks have become available for many European languages but also for Arabic Chinese or Japanese However it was shown that parsing results on these treebanks depend on the types of treebank annotations used Another direction in parsing research is the development of dependency parsers Dependency parsing profits from the non hierarchical nature of dependency relations thus lexical information can be included in the parsing process in a much more natural way Especially machine learning based approaches are very successful cf e g The results achieved by these dependency parsers are very competitive although comparisons are difficult because of the differences in annotation For English the Penn Treebank has been converted to dependencies For this version Nivre et al report an accuracy rate of 86 3% as compared to an F score of 92 1 for Charniaks parser The Penn Chinese

Treebank is also available in a constituent and a dependency representations The best results reported for parsing experiments with this treebank give an F score of 81 8 for the constituent version and 79 8% accuracy for the dependency version The general trend in comparisons between constituent and dependency parsers is that the dependency parser performs slightly worse than the constituent parser The only exception occurs for German where F scores for constituent plus grammatical function parses range between 51 4 and 75 3 depending on the treebank NEGRA or T Ba D Z The dependency parser based on a converted version of T ba D Z in contrast reached an accuracy of 83 4% i e 12 percent points better than the best constituent analysis including grammatical functions **Hybrid Long-Distance Functional Dependency Parsing** Gerold Schneider,2009 We propose a robust hybrid deep syntactic dependency based parser and present its implementation and evaluation The parser is designed to keep search spaces small without compromising much on the linguistic performance or adequacy The resulting parser is deep syntactic like a formal grammar based parser while mostly context free and fast enough for large scale application It combines successful current approaches into a hybrid modular and open model We suggest implement and evaluate a parsing architecture that is fast robust and efficient enough to allow users to do broad coverage parsing of unrestricted texts from varied domains We present a probability model and a combination between a rule based competence grammar and a statistical lexicalized performance disambiguation model We treat long distance dependencies with post processing and mild context sensitivity We conclude that labelled Dependency Grammar is sufficiently expressive for linguistically adequate parsing We argue that our parser covers the middle ground between statistical parsing and formal grammar based parsing The parser has competitive performance and has been applied widely **Recent Developments in Intelligent Computing, Communication and Devices** Srikanta Patnaik,Vipul Jain,2018-08-22 This book offers a collection of high quality peer reviewed research papers presented at the International Conference on Intelligent Computing Communication and Devices ICCD 2017 discussing all dimensions of intelligent sciences intelligent computing intelligent communication and intelligent devices Intelligent computing addresses areas such as intelligent and distributed computing intelligent grid and cloud computing internet of things soft computing and engineering applications data mining and knowledge discovery semantic and web technology hybrid systems agent computing bioinformatics and recommendation systems Intelligent communication is concerned with communication and network technologies such as mobile broadband and all optical networks that are the key to groundbreaking inventions of intelligent communication technologies It includes communication hardware software and networked intelligence mobile technologies machine to machine communication networks speech and natural language processing routing techniques and network analytics wireless ad hoc and sensor networks communications and information security signal image and video processing network management and traffic engineering Lastly intelligent devices are any equipment instruments or machines that have their own computing capability As computing technology becomes more advanced and less expensive it
