Case Studies In Environmental Science:

Case Studies in Environmental Science Larry Underwood,1998 Case Studies in Environmental Science is designed to promote grassroots awareness of global environmental issues through problem solving analysis and verbal and written discussion of topics that pertain to seven regions of the United States and Canada The twelve case studies present a range of views on selected environmental issues in a non biased approach Thought provoking questions commentaries and readings have been included to stimulate students to investigate the issues in further detail beyond the presentation of each case study The accompanying website provides the students with the tools and resources to go beyond the confines of the book and their geographic region Updated monthly the site will provide up to date links to resources and articles for each case in each region Summaries of significant events in each region and for each issue will be provided with additional Critical Thinking questions designed to demonstrate the interrelationships between regions and issues

[Connections in Environmental Science](#) J. Richard Mayer,2001 This brief black and white text takes a totally unique approach to the study of Environmental Science Each major concept is introduced using a case study that relates the topic to real life events that students can relate to and understand In addition each case study is further explained with regard to Regional Perspectives from around the world

Environmental Science Case Studies Richard E. Mayer,1998-01-01 *Societal Dimensions of Environmental Science* Ricardo D. Lopez,2019-03-07 Societal Dimensions of Environmental Science Global Case Studies of Collaboration and Transformation brings together several key examples of the successes and the challenges that exist for environmental stakeholders trying to strike a balance between science and the societal implications of the issues involved This book provides important methods and approaches necessary for informed decision making and a better understanding of the common threads of learning collaboration negotiation and compromise It also explains that concepts and skills needed to better understand how specific project goals can be best achieved in the rapidly changing field of environmental management by providing practical situations and solutions across a global landscape This book provides anyone who works in a community setting with the necessary tools and strategies for solving environmental problems and achieving the goals of an environmental project of any type and specifically addresses the topic of how to synthesize community engagement and the environmental science It describes current environmental issues and lessons learned of what works and what doesn't work in real situations and why It also highlights key examples which can be used by both management practitioners and research scientists in their specific circumstances Showcasing a unique compilation of the diverse and specific examples from societies in Asia Oceania North America and the Middle East with an equally diverse array of authorship this book serves all policy makers scientists organizers and community members that desire to build better group dynamics for addressing environmental issues *Wcs Case Studies in Environmental Science* Wiley,2002-07-01 *Case Studies in Environmental Science* Vance Ete,2024-08-24 Environmental Science A Comprehensive Guide to Climate Change Pollution

Case Studies for Integrating Science and the Global Environment

Alan McIntosh,Jennifer Pontius,2016-09-08 Case Studies for Integrating Science and the Global Environment is designed to help students of the environment and natural resources make the connections between their training in science and math and today's complex environmental issues The book provides an opportunity for students to apply important skills knowledge and analytical tools to understand evaluate and propose solutions to today's critical environmental issues The heart of the book includes four major content areas water resources the atmosphere and air quality ecosystem alteration and global resources and human needs Each of these sections features in depth case studies covering a range of issues for each resource offering rich opportunities to teach how various scientific disciplines help inform the issue at hand Case studies provide readers with experience in interpreting real data sets and considering alternate explanations for trends shown by the data This book helps prepare students for careers that require collaboration with stakeholders and co workers from various disciplines Includes global case studies using real data sets that allow readers to practice interpreting data and evaluating alternative explanationsFocuses on critical skills and knowledge encouraging readers to apply science and math to real world problemsEmploys a system based approach linking air water and land resources to help readers understand that cause effect may be complex and solutions to environmental problems require multiple perspectivesIncludes special features such as links to video clips of scientists at work boxed information a solutions section at the end of each case study and practice exercises

Case Studies In Environmental Science, Second Edit Ion Underwood,2002-01-01 *Sustainable Development in Practice* Adisa Azapagic,Slobodan Perdan,Roland Clift,2004-07-23 This groundbreaking text provides background theory on the concept of sustainable development environmental social and economic aspects and presents a series of practical case studies on such topics as waste water management air quality solid waste management and renewable energy *Keeping Pace with Science and Engineering* National Academy of Engineering,1993-02-01 The technical basis of environmental regulation is always at the edge of scientific and engineering understanding As knowledge improves questions will inevitably arise about past decisions Understanding how the regulatory system accommodates changing scientific and engineering knowledge is vital for achieving environmental values In this new volume seven case studies shed light on the interplay between environmental regulation and scientific and engineering understanding with practical conclusions on how science and engineering should be used for more sound and timely regulatory decision making The book provides helpful timelines of

scientific and regulatory developments for the cases which include Factors impeding clean up strategies in the Chesapeake Bay Pivotal questions in the regulation of ambient ozone concentrations How science has been heeded but also ignored in regulation of new municipal waste combustors Impact of scientific findings on control of chlorination by products Acid rain and what can be learned about research and public policy debate Controversy over the need for formaldehyde regulation The effect of public perception on management decisions concerning dioxin This volume will be of practical interest to policymakers business and environmental advocates scientists engineers researchers attorneys faculty and students

Case Studies in Environmental Archaeology Elizabeth Reitz,C. Margaret Scarry,Sylvia J. Scudder,2008 This book highlights studies addressing significant anthropological issues in the Americas from the perspective of environmental archaeology The book uses case studies to resolve questions related to human behavior in the past rather than to demonstrate the application of methods Each chapter is an original or revised work by an internationally recognized scientist This second edition is based on the 1996 book of the same title The editors have invited back a number of contributors from the first edition to revise and update their chapter New studies are included in order to cover recent developments in the field or additional pertinent topics

Valuing the Environment Jean-Phillipe Barde,David W. Pearce,2023-05-09 The Pearce Report Blueprint for a Green Economy puts the role which monetary evaluation of environmental costs and benefit can play firmly into the public eye This book goes further and looks at six countries where such evaluation techniques are applied and at the obstacles to their further use The case studies written by leading experts in each nation show how these methods are being taken up in the UK Norway and Italy and the ways in which they are already extensively in use in the USA

Germany and the Netherlands The authors also describe the obstacles to their use the lack of knowledge of environmental economics at government level the competition from other government priorities the failure of environmental groups to grasp the importance of financial evaluation to their cause But as this book makes clear significant advances are being made both in the implementation of these economic techniques and above all in striking and yet further developments in economic thinking
