**The Routledge Handbook of Digital Sport Management** Michael L. Naraine, Ted Hayduk III, Jason P. Doyle, 2022-12-01 The Routledge Handbook of Digital Sport Management provides students, researchers, and practitioners with a contemporary roadmap of the impact of digital technologies in sport management at all levels and in all sectors in a global context. Divided into three sections addressing digital transformations, digital tools, and emerging digital issues, this book explores the impact of digital technology in the core functional areas of sport management such as sponsorship, event management, and human resources. It introduces essential digital innovations such as esports, social media, VR, wearables, analytics, and artificial intelligence, and examines the debates and issues that are likely to shape and transform sport business over the next decade. The only book to survey the full sweep of digital sport management, this book is an essential reference for all serious students of sport business and management, any researcher working in the nexus of sport business and digital, and all managers, policy makers, or associated professionals working in the sport industry.

**Sensor Technologies** Michael J. McGrath, Cliodhna Ni Scanaill, Dawn Nafus, 2014-01-23 Sensor Technologies: Healthcare, Wellness, and Environmental Applications explores the key aspects of sensor technologies, covering wired, wireless, and discrete sensors for the specific application domains of healthcare, wellness, and environmental sensing. It discusses the social, regulatory, and design considerations specific to these domains. The book provides an application-based approach using real-world examples to illustrate the application of sensor technologies in a practical and experiential manner. The book guides the reader from the formulation of the research question through the design and validation process to the deployment and management phase of sensor applications. The processes and examples used in the book are primarily based on research carried out by Intel or joint academic research programs. Sensor Technologies: Healthcare, Wellness, and Environmental Applications provides an extensive overview of sensing technologies and their applications in healthcare, wellness, and environmental monitoring. From sensor hardware to system applications and case studies, this book gives readers an in-depth understanding of the technologies and how they can be applied. I would highly recommend it to students or researchers who are interested in wireless sensing technologies and the associated applications.

Dr. Benny Lo, Lecturer, The Hamlyn Centre, Imperial College of London. This timely addition to the literature on sensors covers the broad complexity of sensing sensor types and the vast range of existing and emerging applications in a very clearly written and accessible manner. It is particularly good at capturing the exciting possibilities that will occur as sensor networks merge with cloud-based big data analytics to provide a host of new applications that will impact directly on the individual in ways we cannot fully predict at present. It really brings this home through the use of carefully chosen case studies that bring the overwhelming concept of big data down to the personal level of individual life and health.

Dermot Diamond, Director, National Centre for Sensor Research, Principal Investigator, CLARITY Centre for Sensor Web Technologies, Dublin City University.

Sensor Technologies: Healthcare, Wellness

and Environmental Applications takes the reader on an end to end journey of sensor technologies covering the fundamentals from an engineering perspective introducing how the data gleaned can be both processed and visualized in addition to offering exemplar case studies in a number of application domains It is a must read for those studying any undergraduate course that involves sensor technologies It also provides a thorough foundation for those involved in the research and development of applied sensor systems I highly recommend it to any engineer who wishes to broaden their knowledge in this area Chris Nugent Professor of Biomedical Engineering University of Ulster
