CASIO

## Getting Acquainted

Thank you for purchasing this CASIO product. To ensure that it can provide you with the years of service for which it is designed, be sure to read this manual carefully and follow the instructions contained herein.

### Low Battery Warning

Recover indicator

If you use the light or alarm a number of times during a short period, a RECON (recover) indicator flashes on the display and the following operations become disabled as the battery level recovers.

- Pedometer functions
- Alarm and hourly time signal
- Illumination

Normal operation should return after the battery level recovers, but if the RECON indicator appears frequently you should have the watch's battery replaced.

### About This Manual

- Button operations are indicated using the letters shown in the illustration.
- Each section of this manual provides you with the information you need to perform operations in watch mode. Further details and technical information can be found in the "Reference" section.

## General Guide

### Timekeeping Mode

PM indicator (no indicator for AM)

### Exercise Walking Mode

### Recall Mode

### Alarm Mode

### Stopwatch Mode

### Personal Data Setting Mode

- Use (C) to navigate between modes.
- See "Top Display Area" and "Bottom Display Area" for information about controlling what appears in the top area and the bottom area of the Timekeeping Mode screen.
- Pressing (D) in any mode will illuminate the display for 1.5 seconds.

### Top Display Area

You can select what is displayed in the top area of the Timekeeping Mode screen by pressing (B). Each press cycles in the sequence shown below.

### Energy Consumption Graph

The energy consumption graph shows your energy consumption (based on the number of steps counted) for up to the past seven days.

- Unit = kcal.
- Note that each "bar" of the graph is made up of two display dot columns. Day 5 in the example below indicates energy consumption of 250.1 to 250 kcal. Day 3 indicates 250.1 to 300 kcal.

### Bottom Display Area

You can select what data is displayed in the bottom area of the Timekeeping Mode screen by pressing (D). Each value is the cumulative total for the current date. Each press cycles in the sequence shown below.

- The energy consumption value, distance walked, and current pace are displayed using the units you selected under "To configure personal information settings".

## Using the Watch's Pedometer Functions

Your watch has a built-in pedometer that counts the number of steps you take while walking. It uses this count to calculate distance, pace, and other data. Some of the calculated data is based on personal information you need to input before using the watch. Measured and calculated data can be saved in watch memory for later recall whenever you need it.

### Important!

- Before trying to use the watch's pedometer functions, you first need to configure personal information settings.

### Normal Walking and Exercise Walking

There are two types of walking that can be measured by your watch: normal walking and exercise walking.

### Note

- If you have both normal walking and exercise walking measurement turned on, the watch will give priority to exercise walking.
- Normal walking and exercise walking continue to count your steps while turned on, even if you change to another mode. The only time your steps are not counted is when an alarm is sounding or while a setting screen (indicated by a flashing setting) is on the display.

### Normal Walking Measurement

Use normal walking measurement when you want to count the number of steps you take as you go about your normal daily life. You can turn on normal walking measurement in the Timekeeping Mode.

### Exercise Walking Measurement

As its name suggests, exercise walking measurement is intended for counting your steps while walking briskly, as part of an exercise program. To turn on exercise walking measurement, you need to enter the Exercise Walking Mode.

## Configuring Personal Information

You need to preset the following personal information before the watch can calculate your energy consumption and other data based on the number of steps you take while walking.

- Your current weight
- Your normal walking stride length
- Your exercise walking stride length
- Your age
- Your gender
- The energy consumption unit you want to use
- The weight unit you want to use
- The stride length unit you want to use
- The sensitivity level you want to use

You need to enter the Personal Data Setting Mode to configure personal information settings. While in the Timekeeping Mode, press (D) five times to enter the Personal Data Setting Mode.
