Citizen Participation In Science Policy:

Citizen Participation in Science Policy James C. Petersen, 1982 **Science and Technology Policy** Takefumi Tanaka, 1992 **Science, Policy, and the Value-Free Ideal** Heather E. Douglas, 2009-07-15 The role of science in policymaking has gained unprecedented stature in the United States raising questions about the place of science and scientific expertise in the democratic process Some scientists have been given considerable epistemic authority in shaping policy on issues of great moral and cultural significance and the politicizing of these issues has become highly contentious Since World War II most philosophers of science have purported the concept that science should be value free In *Science Policy and the Value Free Ideal* Heather E Douglas argues that such an ideal is neither adequate nor desirable for science She contends that the moral responsibilities of scientists require the consideration of values even at the heart of science She lobbies for a new ideal in which values serve an essential function throughout scientific inquiry but where the role values play is constrained at key points thus protecting the integrity and objectivity of science In this vein Douglas outlines a system for the application of values to guide scientists through points of uncertainty fraught with moral valence Following a philosophical analysis of the historical background of science advising and the value free ideal Douglas defines how values should and should not function in science She discusses the distinctive direct and indirect roles for values in reasoning and outlines seven senses of objectivity showing how each can be employed to determine the reliability of scientific claims Douglas then uses these philosophical insights to clarify the distinction between junk science and sound science to be used in policymaking In conclusion she calls for greater openness on the values utilized in policymaking and more public participation in the policymaking process by suggesting various models for effective use of both the public and experts in key risk assessments **The Science of Citizen Science** Katrin Vohland, Anne Land-zandstra, Luigi Ceccaroni, Rob Lemmens, Josep Perelló, Marisa Ponti, Roeland Samson, Katherin Wagenknecht, 2021-01-11 This open access book discusses how the involvement of citizens into scientific endeavors is expected to contribute to solve the big challenges of our time such as climate change and the loss of biodiversity growing inequalities within and between societies and the sustainability turn The field of citizen science has been growing in recent decades Many different stakeholders from scientists to citizens and from policy makers to environmental organisations have been involved in its practice In addition many scientists also study citizen science as a research approach and as a way for science and society to interact and collaborate This book provides a representation of the practices as well as scientific and societal outcomes in different disciplines It reflects the contribution of citizen science to societal development education or innovation and provides an overview of the field of actors as well as on tools and guidelines It serves as an introduction for anyone who wants to get involved in and learn more about the science of citizen science [Climate Change and Society](#) Fátima Alves, Luísa Schmidt, 2022-11-01 **Future Survey Annual 1985** Michael Marien, 1987-01-01 *Citizen Participation in Environmental Affairs, 1970-1986* Frederick
