Deep Learning Renormalization

Maurice Jacob,G. Altarelli

Deep Learning Renormalization:

   Renormalization Group Theory, Scaling Laws and Deep Learning Parviz Haggi Mani,2022 The question of the possibility of intelligent machines is fundamentally intertwined with the machines ability to reason Or not The developments of the recent years point in a completely different direction What we need is simple generic but scalable algorithms that can keep learning on their own This thesis is an attempt to find theoretical explanations to the findings of recent years where empirical evidence has been presented in support of phase transitions in neural networks power law behavior of various entities and even evidence of algorithmic universality all of which are beautifully explained in the context of statistical physics quantum field theory and statistical field theory but not necessarily in the context of deep learning where no complete theoretical framework is available Inspired by these developments and as it turns out with the overly ambitious goal of providing a solid theoretical explanation of the empirically observed power laws in neu ral networks we set out to substantiate the claims that renormalization group theory may be the sought after theory of deep learning which may explain the above as well as what we call algorithmic universality   **Emerging Technologies in Data Mining and Information Security** João Manuel R.
