Ceramic Cutting Tools Materials Development And Performance:

Ceramic Cutting Tools E. Dow Whitney, 2012-12-02 Interest in ceramics as a high speed cutting tool material is based primarily on favorable material properties. As a class of materials, ceramics possess high melting points, excellent hardness, and good wear resistance. Unlike most metals, hardness levels in ceramics generally remain high at elevated temperatures, which means that cutting tip integrity is relatively unaffected at high cutting speeds. Ceramics are also chemically inert against most workmetals.

New and Improved Cutting Tool Materials E. Dow Whitney, 1969 This final report contains the results of a continued effort designed to develop new and improved ceramic cutting tool inserts for the more efficient and economical machining of the refractory hard metals required in the fabrication of aerospace devices. ASM Specialty Handbook Joseph R. Davis, 1995-01-01 If you are involved with machining or metalworking or you specify materials for industrial components, this book is an absolute must. It gives you detailed and comprehensive information about the selection, processing, and properties of materials for machining and metalworking applications. They include wrought and powder metallurgy tool steels, cobalt base alloys, cemented carbides, cermets, ceramics, and ultra-hard materials. You'll find specific guidelines for optimizing machining productivity through the proper selection of cutting tool materials, plus expanded coverage on the use of coatings to extend cutting tool and die life. There is also valuable information on alternative heat treatments for improving the toughness of tool and die steels. All new material on the correlation of heat treatment, microstructures, and properties of tool steels is supplemented with dozens of photomicrographs. Information on special tooling considerations for demanding applications such as isothermal forging, die casting of metal matrix composites, and molding of corrosive plastics is also included. And you'll learn about alternatives to ferrous materials for metalworking applications such as carbides, cermets, ceramics, and nonferrous metals like aluminum.
