involvement in the development, regulation and safe use of medicines Council for International Organizations of Medical Sciences (CIOMS), 2022-09-05 This report describes the importance of systematically involving patients throughout a medicine's life from its early development through the regulatory process to ongoing monitoring and safe use in everyday healthcare. It provides a comprehensive overview of the current knowledge about the benefits of patient involvement and existing initiatives, gives many examples and recommendations, and addresses the remaining challenges and practice gaps. The report will prompt readers to implement its best practice recommendations according to how well they fit in with their organizational and national needs. The report combines the experience and expertise of the CIOMS Working Group XI on Patient involvement in the development, regulation and safe use of medicines. It also incorporates views gathered from an open meeting in Switzerland and a workshop in Uganda which both brought together members of the public, patient organization representatives, regulators, drug development experts, industry, academia, health professionals, and other related stakeholders. The report was finalized following a public consultation. CIOMS is an international non-governmental non-profit organization with the mission to advance public health through guidance on health research and policy, including ethics, medical product development, and pharmacovigilance. <https://doi.org/10.56759/CIOMS8982>

The Economics of US Health Care Policy Charles E. Phelps, Stephen T. Parente, 2017-11-13 In this book, Phelps and Parente explore the US health care system and set out the case for its reform. They trace the foundations of today's system and show how distortions in the incentives facing participants in the health care market could be corrected in order to achieve lower costs, a higher quality of care, a higher level of patient safety, and a more efficient allocation of health care resources. Phelps and Parente propose novel yet economically robust changes to US tax law affecting health insurance coverage and related issues. They also discuss a series of specific improvements to Medicare and Medicaid and assess potential innovations that affect all of health care, including chronic disease management, fraud and abuse detection, information technology, and other key issues. The Economics of US Health Care Policy will be illuminating reading for anyone with an interest in health policy and will be a valuable supplementary text for courses in health economics and health policy, including for students without advanced training in economics.

Leveraging the Potentials of Peer Learning Sarah Oestereiß, 2019-01-23 The digitization changes qualification demands of knowledge workers and opens new forms of collaboration. Solutions are required for enhancing acquisition and transfer of knowledge as well as training professional skills such as critical thinking, communication, and cooperation. Peer Learning (PL) provides potentials for coping with these demands. However, it faces practical challenges as its reusability is low, collaboration expertise is required, and lacks leveraging digitization potentials. In contrast, the body of Collaboration Engineering (CE) literature provides insights as it is an approach to designing collaborative work practices for high-value recurring tasks and deploying those to practitioners to execute for themselves without collaboration expertise. In this light, three research questions shape the structure of the thesis. First, the thesis shows an

analysis of the application domain and develops a teaching learning approach for creating conditions for PL in large scale lectures Second it proposes an approach to designing reference processes for enhancing PL Third it presents three studies that illustrate the design instantiation and evaluation of reference processes for enhancing PL in the field As methodological approach the thesis uses Design Science and develops instantiates and evaluates reusable reference processes for enhancing PL
