Drug Discovery and Clinical Research SK Gupta, Transforming Clinical Research in the United States

Institute of Medicine, Board on Health Sciences Policy, Forum on Drug Discovery, Development, and Translation, 2010-10-22

An ideal health care system relies on efficiently generating timely accurate evidence to deliver on its promise of diminishing the divide between clinical practice and research. There are growing indications however that the current health care system and the clinical research that guides medical decisions in the United States falls far short of this vision. The process of generating medical evidence through clinical trials in the United States is expensive and lengthy, includes a number of regulatory hurdles and is based on a limited infrastructure. The link between clinical research and medical progress is also frequently misunderstood or unsupported by both patients and providers. The focus of clinical research changes as diseases emerge and new treatments create cures for old conditions. As diseases evolve, the ultimate goal remains to speed new and improved medical treatments to patients throughout the world. To keep pace with rapidly changing health care demands, clinical research resources need to be organized and on hand to address the numerous health care questions that continually emerge. Improving the overall capacity of the clinical research enterprise will depend on ensuring that there is an adequate infrastructure in place to support the investigators who conduct research, the patients with real diseases who volunteer to participate in experimental research, and the institutions that organize and carry out the trials. To address these issues and better understand the current state of clinical research in the United States, the Institute of Medicine's IOM Forum on Drug Discovery, Development, and Translation held a 2 day workshop entitled *Transforming Clinical Research in the United States*. The workshop, summarized in this volume, laid the foundation for a broader initiative of the Forum addressing different aspects of clinical research. Future Forum plans include further examining regulatory, administrative, and structural barriers to the effective conduct of clinical research, developing a vision for a stable, continuously funded clinical research infrastructure in the United States, and considering strategies and collaborative activities to facilitate more robust public engagement in the clinical research enterprise. *Clinical Research from Discovery to Development* Dr K Ashish, Gaurav

Goel, 2014-04-25. This book will serve as a pool of fundamentals and principles involved in Clinical Research with a primary focus on Drug development and clinical trial processes: Good Clinical Practices (GCP) guidelines, Drug regulatory affairs, Roles and responsibilities of various clinical trial stakeholders, etc. The objective of this book is to provide high end training and knowledge about clinical research from discovery to development. **Envisioning a Transformed Clinical Trials**

Enterprise for 2030: Proceedings of a Workshop National Academies of Sciences Engineering and Medicine, National Academies of Sciences Engineering and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Forum on Drug Discovery, Development, and Translation, 2022-08-09. The evolution of health care is expanding the possibilities for integration of clinical research into the continuum of clinical care. New approaches are enabling the collection of data in real world

settings and new modalities such as digital health technologies and artificial intelligence applications are being leveraged to overcome challenges and advance clinical research. At the same time, the clinical research enterprise is strained by rising costs, varying global regulatory and economic landscapes, increasing complexity of clinical trials, barriers to recruitment and retention of research participants, and a clinical research workforce that is under tremendous demands. Looking ahead to 2030, the Forum on Drug Discovery Development and Translation of the National Academies of Sciences Engineering and Medicine convened a public workshop for stakeholders from across the drug research and development life cycle to reflect on the lessons learned over the past 10 years and consider opportunities for the future. The workshop was designed to consider goals and priority action items that could advance the vision of a 2030 clinical trials enterprise that is more efficient, effective, person-centered, inclusive, and integrated into the health care delivery system so that outcomes and experiences for all stakeholders are improved. This Proceedings of a Workshop summarizes the presentations and discussions that took place during the four-part virtual public workshop held on January 26, February 9, March 24, and May 11, 2021.

Accelerating the Development of Biomarkers for Drug Safety

Institute of Medicine, Board on Health Sciences Policy, Forum on Drug Discovery, Development, and Translation, 2009-08-20. Biomarkers can be defined as indicators of any biologic state and they are central to the future of medicine. As the cost of developing drugs has risen in recent years, reducing the number of new drugs approved for use, biomarker development may be a way to cut costs, enhance safety, and provide a more focused and rational pathway to drug development. On October 24, 2008, the IOM's Forum on Drug Discovery, Development, and Translation held Assessing and Accelerating Development of Biomarkers for Drug Safety, a one-day workshop summarized in this volume on the value of biomarkers in helping to determine drug safety during development.
