on-Demand; Studying the Enterprise Cloud Computing and its Role in Green IT Seyed Amir Beheshti,2011-08-24 Master s Thesis from the year 2011 in the subject Engineering Industrial Engineering and Management grade 1 Vienna University of Technology course Business Engineering and Computer Science language English abstract Climate change and the impact it has on our lives have forced many governmental and also non governmental organizations to conceive of new rules regulations and standards to control CO2 and greenhouse gas GHG emissions Calculating the energy efficiency and reducing the electricity consumption in data centers are important steps towards greening the IT in organizations Several studies have shown that by migrating into the cloud companies in most cases could reduce their costs in addition to decreasing their greenhouse gas emissions Unfortunately lack of guidelines and varying and limited services from different cloud providers have made the adoption of appropriate Cloud services a challenge for many organizations In this regard there is a vital need to study and analyze available services from different cloud vendors and provide enterprises with the best solutions available regarding their specific business requirements This thesis focuses on cloud computing and its efficiency for individual organizations It attempts to study the potential benefits of cloud computing by taking the environmental and energy consumption advantages into consideration Cloud Computing is not a new concept and has been a hype term in recent years Cloud computing is based on the available technologies and it is all about using a new term for the existing technologies But the question is why to create a new name for what already exists The answer to this question is closely related to the potential that Cloud computing has for organizations It is all about conversion of capital expenditure

CAPEX to the operational expenditure OPEX and the possible advantages that this conversion could have for any organization that chooses to migrate into the Cloud. In the following, upon introducing the cloud computing concept and its related technologies, business functions and processes, information systems available for enterprises are explored. Later, based on the required business processes and functions of organizations, a comprehensive market analysis is carried out. For this purpose, different cloud providers and their available services are analyzed. I developed an ontology for cloud computing based on the market analysis. This thesis is an attempt to make the process of mapping business processes, functions to cloud services easier by providing organizations with a matrix of cloud services, business processes, distribution of market, and an ontology for cloud computing.

Abstract: A typical comprehension of cloud computing is constantly advancing, and the phrasing and Cloud computing was begat for what happens when services and applications are moved into the internet, that is cloud. Cloud processing is not something that abruptly seemed overnight; in some structure, it may follow back to a period when computer system frameworks remotely time shared, registering assets and applications. All the more presently, however, cloud computing alludes to the a wide range of sorts of applications and services being conveyed in the cloud, and the way that much of the time the devices used to get to these services don't require any unique applications. With the help of cloud computing, you can utilize programming conveyed through the Internet on the program with no installation, have an application on the Internet, set up your own storage of remote file and database framework, and that's just the beginning.
