Quentin W. Fleming,Joel M. Koppelman,2000 Earned value is a project management technique that is emerging as a valuable tool in the management of all projects including and in particular software projects In its most simple form earned value equates to fundamental project management This is not a new book but rather it is an updated book Authors Quentin Fleming and Joel Koppelman have made some important additions In many cases there will be no changes to a given section But in other sections the authors have made substantial revisions to what they had described in the first edition Fleming and Koppelman s goal remains the same with this update describe earned value project management in its most fundamental form for application to all projects of any size or complexity Writing in an easy to read friendly and humorous style characteristic of the best teachers Fleming and Koppelman have identified the minimum requirements that they feel are necessary to use earned value as a simple tool for project managers They have also witnessed the use of simple earned value on software projects and find it particularly exciting Realistically a Cost Performance Index CPI is the same whether the

project is a multibillion dollar high technology project or a simple one hundred thousand dollar software project A CPI is a CPI period It is a solid metric that reflects the health of the project In every chapter Fleming and Koppelman stick with using simple stories to define their central concept Their project examples range from peeling potatoes to building a house Examples are in round numbers and most formulas get no more complicated than one number divided by another Earned Value Project Management second edition may be the best written most easily understood project management book on the market today Project managers will welcome this fresh translation of jargon into ordinary English The authors have mastered a unique early warning signal of impending cost problems in time for the project manager to react **EARNED VALUE MANAGEMENT: Integrated View of Cost and Schedule Performance** Piyush Solanki,2009 This book is organized with a brief overview of EVM highlighting the key management questions EVM can help answer and exploring where EVM fits into the project management universe It also emphasizes EVM Performance Analysis and contains the basic elements of Earned Value Management This book also outlines basic EVM practices in their project management context and shows how EVM practices facilitate project planning and control for better management of project cost and schedule performance **Cost and Value Management in Projects** Alex K. **Strategic Lean Thinking and Value Management for Gravel Roads in Zambia** Richard Kasongo, 2015-11-25 Doctoral Thesis Dissertation from the year 2015 in the subject Engineering General course Civil Engineering Management Construction Project Management language English abstract This research topic is entitled Strategic Lean Thinking and Value Management for Gravel Roads The study captured 82 respondents as research sample to a case study of Output Performance Based Contracts OPRCs for the Construction and Maintenance of Gravel Roads in Zambia Purposive sampling was used as most research participants were drawn from second generation OPRCs that were active between 2009 and 2014 The study was aimed at devising new Construction and Maintenance Contract methods for gravel roads that are based on Lean Thinking and Value Management philosophies in Zambia The established

epistemological background to the study is that most of the Zambian road network is of gravel or earth standards and is therefore imperative that they are well maintained to attain desired service levels to properly serve the intended beneficiaries the road users The Road Development Agency Annual Report of 2009 indicated that 33 000 Km of the total 40 671 Km core road network is classified as gravel roads unpaved which are at the moment mostly in a deteriorated state The study revealed that currently in Zambia Gravel Road Construction projects are commonly being realised through the use of traditional Contracts such as admeasured by the use of Bills of Quantities BOQs the Lump sum and Cost plus etc These are mainly short term form of Contracts which to some extent lack some components of sustainable maintenance regimes thereby rendering the Government and other Promoters efforts futile as gravel roads sooner or later deteriorate just after the first rain season upon their construction This was theoretical perspective which served as driver to the Research problem The study noted that current forms of Contracts did not inspire aspire and spur the spirit of ownership as the local people were left out in the planning and design stages of gravel road projects Despite all the attempts made by Government through the RDA and other implementing Agencies the Road Construction Industry in general has failed to get the best value for money through the use of these conventional types of Contracts One of the reasons for this failure according to Womack and Jones 2003 is that it is hard to define and realise value this is partly because most Producers Road Contractors want to make what they are already making and partly because Customers only know some variant of what they are already getting
