Social Sensing and Big Data Computing for Disaster Management Zhenlong Li, Qunying Huang, Christopher T. Emrich, 2020-12-17 Social Sensing and Big Data Computing for Disaster Management captures recent advancements in leveraging social sensing and big data computing for supporting disaster management Specifically analysed within this book are some of the promises and pitfalls of social sensing data for disaster relevant information extraction impact area assessment population mapping occurrence patterns geographical disparities in social media use and inclusion in larger decision support systems Traditional data collection

methods such as remote sensing and field surveying often fail to offer timely information during or immediately following disaster events. Social sensing enables all citizens to become part of a large sensor network which is low cost, more comprehensive and always broadcasting situational awareness information. However, data collected with social sensing is often massive, heterogeneous, noisy and unreliable in some aspects. It comes in continuous streams and often lacks geospatial reference information. Together, these issues represent a grand challenge toward fully leveraging social sensing for emergency management decision making under extreme duress. Meanwhile, big data computing methods and technologies such as high performance computing, deep learning and multi source data fusion become critical components of using social sensing to understand the impact of and response to the disaster events in a timely fashion. This book was originally published as a special issue of the International Journal of Digital Earth.

Entropy Based Fatigue, Fracture, Failure

Prediction and Structural Health Monitoring Cemal Basaran, 2021-01-13 Traditionally, fatigue fracture damage mechanics are predictions are based on empirical curve fitting models based on experimental data. However, when entropy is used as the metric for degradation of the material, the modeling process becomes physics based rather than empirical modeling. Because entropy generation in a material can be calculated from the fundamental equation of the material. This collection of manuscripts is about using entropy for Fatigue Fracture Failure Prediction and Structural Health Monitoring. The theoretical paper in the collection provides the mathematical and physics framework behind the unified mechanics theory which unifies universal laws of motion of Newton and laws of thermodynamics at ab initio level. Unified Mechanics introduces an additional axis called Thermodynamic State Index axis which is linearly independent from Newtonian space x y z and time. As a result, derivative of displacement with respect to entropy is not zero in unified mechanics theory as in Newtonian mechanics. Any material is treated as a thermodynamic system and fundamental equation of the material is derived. Fundamental equation defines entropy generation rate in the system. Experimental papers in the collection prove validity of using entropy as a stable metric for Fatigue Fracture Failure Prediction and Structural Health Monitoring.

Computers in Earth and Environmental Sciences Hamid Reza Pourghasemi, 2021-09-22 Computers in Earth and Environmental Sciences Artificial Intelligence and Advanced Technologies in Hazards and Risk Management addresses the need for a comprehensive book that focuses on multi hazard assessments natural and manmade hazards and risk management using new methods and technologies that employ GIS, artificial intelligence, spatial modeling, machine learning tools and meta heuristic techniques. The book is clearly organized into four parts that cover natural hazards, environmental hazards, advanced tools and technologies in risk management and future challenges in computer applications to hazards and risk management. Researchers and professionals in Earth and Environmental Science who require the latest technologies and advances in hazards, remote sensing, geosciences, spatial modeling and machine learning will find this book to be an invaluable source of information on the latest tools and technologies available. Covers advanced tools and technologies in risk

management of hazards in both the Earth and Environmental Sciences Details the benefits and applications of various technologies to assist researchers in choosing the most appropriate techniques for purpose Expansively covers specific future challenges in the use of computers in Earth and Environmental Science Includes case studies that detail the applications of the discussed technologies down to individual hazards
