This work addresses the environmental recognition of autonomous off road vehicles Algorithms like deep learning offer
 impressive performance regarding the classification and segmentation of a scene However context changes scene
 variabilities or disturbances pose significant challenges to these approaches and cause perception failures A challenge is
 achieving the universal applicability of perception algorithms Usually an algorithm fails in particular situations due to
 unconsidered circumstances in the design phase and complexity prevents fully considering all details Accordingly this thesis
 aims to increase the perception s robustness through context and data incorporation Furthermore it derives concepts for
 transferring methods to other robots and scenes A hint that such a task is achievable provides human cognition which is
 remarkably skillful and adjusts to arbitrary situations Biologically motivated perception and cognitive research indicate how
 an achievable perception design might function leading to guidelines for artificial perception conception The paradigm of
 behavior based systems suits these criteria due to modularity reactivity and robustness It allows realizing robust and
 transferable perception and control systems Consequently the thesis proposes a novel and reconfigurable behavior based top
 down and bottom up perception approach Quality assessment for data filtering and deviation control is a central aspect
 resulting in improved perception and data fusion results Attentional processing allows for selecting data based on
 attractiveness task environmental context and history Further context assessment of classification results enables reasoning
 according to the robot s memories and knowledge Validation uses five demonstrator vehicles operating in diverse
 environments and fulfilling distinct tasks Here a robust performance was achievable and perception adjusted well to the
 tested scenes and hardware layouts **Writing & Designing Manuals** Gretchen H. Schoff,Patricia A. Robinson,1991-07
