Information Systems P. Garbacz,O. Kutz,2014-09-05 Formal Ontology in Information Systems FOIS is the flagship conference of the International Association for Ontology and its Applications IAOA Its interdisciplinary research focus lies at the intersection of philosophical ontology linguistics logic cognitive science and computer science as well as in the applications of ontological analysis to conceptual modeling knowledge engineering knowledge management information systems development library and information science scientific research and semantic technologies in general As in previous years FOIS 2014 was a nexus of interdisciplinary research and communication The current proceedings is divided into four main sections dealing with foundations processes agency and dispositions methods and tools and applications The last of these covers a broad spectrum of areas including in particular biology and medicine engineering and economy For the first time in its history the conference hosted a special track an ontology competition the aim of which was to encourage authors to make their ontologies publicly available and to allow them to be evaluated according to a set of predetermined criteria Papers discussing these ontologies can also be found in this volume The book will be of interest to all those whose work involves the application of ontologies and who are looking for a current overview of developments in formal ontology

Ontology-Based Evolution of Domain-Oriented Languages Eduard Babkin,Boris Ulitin,2023-11-24 This book focuses on the study of ontology based models and methods used for the implementation of the evolution of external domain specific languages DSL which are mainly intended for modelling the structure of human machine interfaces The primary goal of the approach is to increase the efficiency of support processes during the life cycle of general purpose software systems The book is structured in seven chapters Chapter 1 presents the objectives and significance of the research as well as a summary of the contents of the work Chapter 2 analyses the existing classical DSL design and implementation methodology for modelling human machine interfaces in the context of the lifecycle of general purpose software systems Next chapter 3 is devoted to an analysis of existing methods and formalisms used in describing the structure of a DSL for modelling human machine interfaces of software systems Subsequently chapter 4 provides a detailed description of the proposed new projection based approach for developing such DSLs Chapter 5 then describes the software implementation of the human machine interface evolution based on an example of an external DSL in two domains Eventually chapter 6 analyses the application of the proposed projection approach for more complex systems namely decision support systems based on heterogeneous information of decision makers The concluding chapter 7 summarizes the main results of the research and

suggests further development paths and practical applications The book is written for researchers in model driven software development in general and in domain specific language engineering in particular The Metaphysics of the School: Book 1. The definition; Book 2. Being.; Book 3. Attributes of being Thomas Harper,1879 Formal Ontology in Information Systems B. Bennett,C. Fellbaum,2006-10-26 Aims to provide a forum for genuine interdisciplinary exchange in the spirit of a unified effort towards solving the problems of ontology with an eye to both theoretical issues and concrete applications This book contains a range of areas all of which are important to the development of formal ontologies Knowledge Engineering and Knowledge Management: Ontologies and the Semantic Web V. Richard Benjamins,2003-08-02 th This volume contains the papers presented at the 13 International Conference on Knowledge Engineering and Knowledge Management EKAW 2002 held in Sig enza Spain October 1 4 2002 Papers were invited on topics related to Knowledge Acquisition Knowledge Management Ontologies and the Semantic Web A total of 110 papers were submitted Each submission was evaluated by at least two reviewers The selection process has resulted in the acceptance of 20 long and 14 short papers for publication and presentation at the conference an acceptance rate of about 30% In addition one invited paper by a keynote speaker is included This volume contains 8 papers on Knowledge Acquisition 4 about Knowledge Management 16 on Ontologies and 6 papers about the Semantic Web This was the second time EKAW 2000 being the first that the event was organized as a conference rather than as the usual workshop hence the acronym European Knowledge Acquisition Workshop The large number of submissions 110 versus the usual 40 60 is an indication that the scientific community values EKAW as an important event to share experiences in the Knowledge Technology area worthy of being organized as a prestigious international conference Knowledge is the fuel of the upcoming Knowledge Economy Therefore we believe that conferences such as EKAW that focus on Knowledge Technologies will continue to play a major role as a platform for sharing and exchanging experiences and knowledge between key players in the area Handbook of Terminology Hendrik J. Kockaert,Frieda Steurs,2015-03-13 Terminology has started to explore unbeaten paths since W ster and has nowadays grown into a multi faceted science which seems to have reached adulthood thanks to integrating multiple contributions not only from different linguistic schools including computer corpus variational socio cognitive and socio communicative linguistics and frame based semantics but also from engineering and formal language developers In this ever changing and diverse context Terminology offers a wide range of opportunities ranging from standardized and prescriptive to prototype and user based approaches At this point of its road map Terminology can nowadays claim to offer user based and user oriented hence user friendly approaches to terminological phenomenona when searching extracting and analysing relevant terminology in online corpora when building term bases that contribute to efficient communication among domain experts in languages for special purposes or even when proposing terms and definitions formed on the basis of a generally agreed consensus in international standard bodies Terminology is now ready to advance further thanks to the integration of meaning description

taking into account dynamic natural language phenomena and of consensus based terminology management in order to help experts communicate in their domain specific languages In this Handbook of Terminology HoT the symbiosis of Terminology with Linguistics allows a mature and multi dimensional reflection on terminological phenomena which will eventually generate future applications which have not been tested yet in natural language The HoT aims at disseminating knowledge about terminology management and at providing easy access to a large range of topics traditions best practices and methods to a broad audience students researchers professionals and lecturers in Terminology scholars and experts from other disciplines among which linguistics life sciences metrology chemistry law studies machine engineering and actually any expert domain In addition the HoT addresses any of those with a professional or personal interest in multilingual terminology translation interpreting localization editing etc such as communication specialists translators scientists editors public servants brand managers engineers intercultural organization specialists and experts in any field Moreover the HoT offers added value in that it is the first handbook with this scope in Terminology which has both a print edition also available as a PDF e book and an online version For access to the Handbook of Terminology Online please visit <http://www.benjamins.com/online/hot> The HoT is linked to the Handbook of Translation Studies not in the least because of its interdisciplinary approaches but also because of the inevitable intertwining between translation and terminology All chapters are written by specialists in the different subfields and are peer reviewed

Handbook of Semantic Web Technologies John Domingue, Dieter Fensel, James A. Hendler, 2011-06-19 After years of mostly theoretical research Semantic Web Technologies are now reaching out into application areas like bioinformatics eCommerce eGovernment or Social Webs Applications like genomic ontologies semantic web services automated catalogue alignment ontology matching or blogs and social networks are constantly increasing often driven or at least backed up by companies like Google Amazon YouTube Facebook LinkedIn and others The need to leverage the potential of combining information in a meaningful way in order to be able to benefit from the Web will create further demand for and interest in Semantic Web research This movement based on the growing maturity of related research results necessitates a reliable reference source from which beginners to the field can draw a first basic knowledge of the main underlying technologies as well as state of the art application areas This handbook put together by three leading authorities in the field and supported by an advisory board of highly reputed researchers fulfils exactly this need It is the first dedicated reference work in this field collecting contributions about both the technical foundations of the Semantic Web as well as their main usage in other scientific fields like life sciences engineering business or education

The Problem of Metaphysics and the Meaning of Metaphysical Explanation Hartley Burr Alexander, Percy Hughes, William Hallock Johnson, 1902 *Integrating Ontological Metadata* Peter C. Weinstein, 1999 **The Meaning of the Terms: 'existence' and 'reality'** Alvin Thalheimer, 1920 **The Monist** Paul Carus, 1930 Vols 2 and 5 include appendices Hegel's Ontology and the Theory of Historicity Herbert Marcuse, 1987

This was Herbert Marcuse's first book on Hegel written in the early 1930s when he was under the strong influence of Martin Heidegger. It provides a still unequaled Heideggerian reading of Hegel's thought that seeks the defining characteristics of historicity: what it means to say that a historical event happens. These ideas were foundational for Marcuse; they express a tradition known as phenomenological Marxism subsequently represented by Jean Paul Sartre and Maurice Merleau-Ponty and by some members of the Praxis group in Yugoslavia. The book is in two parts. The first analyzes Hegel's *Logic* in order to identify its ontological problematic or theory of being by focusing on Hegel's *Early Theological Writings* and the *Phenomenology of Spirit*; the second part argues that the concept of Life in its historicity was in fact the original foundation of Hegelian ontology. Clearly this is a purer form of philosophizing than Marcuse was to pursue after he joined the *Institut für Sozialforschung*, discovered Freud, and distanced himself from Heidegger's philosophy. But there is a definite connection between his analysis of historicity in this important early work and his later attempts to understand the underlying dynamic of contemporary history and society in such books as *One Dimensional Man* and *Eros and Civilization*. Hegel's *Ontology and the Theory of Historicity* is included in the series *Studies in Contemporary German Social Thought* edited by Thomas McCarthy.
