A general introduction to the cardiovascular system is followed by chapters on key topics such as anatomy and histology, blood and body fluids, biochemistry, excitation contraction coupling, form and function, integration and regulation, pathology and therapeutics, clinical examination and investigation, all supported by clinical cases for self assessment. Highly visual colour illustrations complement the text and consolidate learning. The Cardiovascular System at a Glance is the perfect introduction and revision aid to understanding the heart and circulation and now also features an additional chapter on pulmonary hypertension.

Even more simplified illustrations to aid easier understanding. Reorganized and revised chapters for greater clarity. Brand new and updated clinical case studies illustrating clinical relevance and for self assessment. The fourth edition of The Cardiovascular System at a Glance is an ideal resource for medical students whilst students of other health professions and specialist cardiology nurses will also find it invaluable. **Haemodynamic Monitoring and Manipulation** Fiona Foxall,2009 The adequacy of the cardio respiratory system can generally be gauged from basic clinical signs such as heart rate blood pressure respiratory rate and depth skin texture and colour use of accessory muscles of respiration and mental status These basic signs should never be ignored but in critical illness basic clinical assessment alone may be unreliable and misleading Therefore further monitoring techniques are usually required Cardiac output and the circulation can be manipulated by uid and drug administration to ensure good oxygen delivery to the tissues but in order to do this ongoing monitoring is required Many healthcare professionals nd it difficult to get to grips with the more complex forms of haemodynamic monitoring and the use of inotropic and vasoactive agents indeed these things can seem rather daunting If you work your way through this book and carry out the exercises you will soon become more con dent and competent about haemodynamic monitoring and manipulation as well as understanding all the information that initially seems so complicated
