## **Children Without Language From Dysphasia To Autism:**

**Children Without Language** Laurent Danon-Boileau, 2006 Communication and language disorders are often considered from one particular point of view either psychological or neurological Danon Boileau argues that this is a serious mistake He emphasizes that a child's trouble can stem from a variety of causes neurological problems similar to those of aphasia cognitive impairments and psychological disorders and thus the interaction of these elements needs to be taken into account In precise case studies Danon Boileau describes the situations he has confronted and traces the causes of changes in the child when they happen Combining linguistic cognitive and psychanalytic approaches *Children without Language* provides a unique perspective on speech and communication disorders in children and will be an essential volume for speech therapists developmental psychologists linguistics scholars and anyone wishing to reflect seriously on why we speak and how communication occurs

**Handbook of Child Psychopathology** Thomas H. Ollendick, 2013-11-11 In our first edition of the Handbook in 1983 we noted that child psychopathology should no longer be viewed simply as a downward extension of adult psychopathology Rather we suggested that children must be viewed as children not as miniature adults and that a merger of clinical child psychology and developmental psychology must occur in order for this objective to be realized Now 6 years later we are sufficiently encouraged to assert that this synthesis at least on a conceptual level is well under way Yet much growth remains to be seen along practical lines The real test of the synthesis of these two fields of study will be evidenced on the battlefield that is the front line of clinical practice Just how integrated clinical child psychology and developmental psychology really are remains to be seen Nonetheless progress is well under way Careful attention to developmental and other contextual issues guided us in our efforts to solicit contributors for this second edition All the contributors are active researchers and clinicians in the area of child psychopathology and all are keenly aware of the subtle nuances and special considerations of clinical and developmental psychology as they relate to child behavior problems In addition all the contributors are empirically minded as a result the chapters are data based and represent some of the most up to date knowledge currently available However as research based knowledge is more abundant and conclusive in some topic areas than in others the chapters vary in length and scope

**Acquired Aphasia in Children** Isabel Pavão Martins, A. Castro-Caldas, Hugo R. van Dongen, Anne van Hout, 1991-07-31 One of the most fascinating problems in Behavioural Neurology is the question of the cerebral organization for language during childhood Acquired aphasia in children albeit rare is a unique circumstance in which to study the relations between language and the brain during cerebral maturation Its study further contributes to our understanding of the recovery processes and brain plasticity during childhood But while there is a great amount of information and experimental work on brain behaviour relationships in adult subjects the literature about the effects of focal brain lesions in children is both exiguous and scattered throughout scientific journals and books We felt it was time to organize a meeting where scientists in this field could compare their experiences and discuss ideas coming from

different areas of research A workshop on Acquired Aphasia in Children was held in Sintra Portugal on September 13 15 1990 and attended by 44 participants from 13 different countries The atmosphere was relaxed and informal and the group was kept small to achieve this effect It was a very lively and pleasant meeting Some consensus was indeed arrived at concerning methodological problems definition of terms and guidelines for future research The main contributions are collected in this book which we hope will serve the scientific community as a reference work on Childhood Aphasia I P M AC C

**Developmental Psychiatry** Michael Rutter, 1987 This book provides a nontechnical account of human development that is particularly relevant to an understanding of psychiatric disorders In describing the process of physical mental emotional and behavioral development the contributors emphasize the aspects of development of greatest interest to clinicians and examine normal development in relation to its implications in clinical pathology
